The *Donkey Kong Country* Board Game

Game designed by Justin and Joshua Patrick, 2011-2020. Donkey Kong Country series by Nintendo and Rare.

Prepare for a thrilling strategic adventure as you travel across Donkey Kong Country, while competing to collect resources in order to build every single one of the SNES trilogy's 142 levels. You must wisely choose your Kong character, carefully determine when and which of your items and cards to use or drop, bargain with other players, and anticipate upcoming disasters. Thorough knowledge of the games is not necessary (there are no trivia questions, etc.), but it can help a little bit.

The ultimate goal is to reach the finish space, "306% complete." But in order to be able to go to this space, you must build every level, get an "!" on every level by completing it thoroughly (or asking Cranky for help), and win each of the 5 K. Rool fights. This guide will attempt to explain the rules of the game as thoroughly as possible, divided into sections detailing the various features.

Contents:

- Supplies
- Getting Started
- Gameplay Sequence
- Level Checklist
- Bonus & Item Details
- Other Important Notes

Supplies:

1 DKC Board Game board

1 level checklist for each player (2 to 4)

1 checkpoint barrel

7 Kong character pieces

 Donkey Kong

 Diddy Kong

 Dixie Kong

 Kiddy Kong

[] Tiny Kong
[] Lanky Kong
[] Chunky Kong

7 Kong character cards

5 dice

1 black 6-side

1 red 8-side

1 blue 10-side (NOTE: In this board game, “0” on this die always means “10.”)

1 green 12-side

1 yellow 20-side

475 bills

Cash

40 $1 bananas

40 $5 banana coins

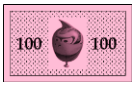

40 $10 banana bunches

40 $20 KONG letters

40 $50 Kremkoins

60 $100 1-up balloons

40 $200 2-up balloons

40 $300 3-up balloons

20 $1000 DK coins

[] 15 $5000 giant bananas

[] 40 extra lives

[] 60 bonus coins

[] 12 animal tokens

60 tokens

 20 camera pieces

 20 golden feathers

 20 banana birds

183 space cards
40 DKC Bonus
40 DKC2 Bonus
40 DKC3 Bonus
50 ANY Bonus
5 Bonus Item
23 Funky's Flights
120 Bazaar's General Store

685 level-building cards
236 environment cards

- 15 Jungle
- 15 Caves
- 15 Coral Reef
- 12 Trees
- 10 Banana Hoard
- 10 Mines
- 10 Cliffs
- 10 Glacier
- 10 Factory
- 10 Castle
- 8 Scaffolding
- 8 Forest
- 8 Ice Cave
- 8 Rigging
- 8 Volcano
- 8 Pipes
- 6 Ship Deck
- 6 Ship Hold
- 6 Swamp
- 6 Brambles
- 6 Beehive
- 6 Docks
- 6 Barn
- 6 Waterfall

- 5 River
- 5 Temple
- 5 Theme Park
- 4 Library
- 4 Gunship

328 resource cards
- 40 Gauntlet
- 35 Water
- 30 Boss
- 25 Ropes
- 25 Barrels
- 20 Barrel Cannons
- 15 Storm
- 12 Drums
- 12 Carts
- 12 Lights
- 12 Hooks
- 10 Race
- 10 Conveyors
- 10 Angry Fish
- 10 Wind
- 10 Tires
- 8 Rising Danger
- 6 Mincers
- 6 Ghosts
- 5 Balloons
- 5 Krockheads
- 5 Doors
- 5 Millstones

121 animal cards
- 20 Enguarde
- 20 Squawks
- 17 Squitter
- 12 Rambi
- 10 Ellie
- 8 Parry
- 8 Rattly
- 6 Expresso
- 6 Winky
- 5 Quawks
- 5 Clapper
- 4 Glimmer

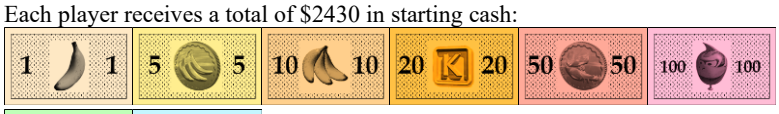

The Kongs

Each of the 7 playable Kongs has certain advantages and disadvantages, so you can try to pick one that best suits your playstyle – or just whichever Kong you're a fan of. There are 4 major characteristics that each Kong is good or bad at: speed, money, inventory, and lives. Each Kong also has positive and negative special abilities which can come into play under specific circumstances.

	Speed Die used for movement	Money Received when passing the start space	Inventory Max size, including cards and tokens	Lives Starting amount, but can gain more
Kiddy	8	$315	30	8
Donkey	10	$375	45	3
Dixie	12	$450	20	4
Diddy	20	$110	25	5

Getting Started

1. Make sure that you have all of the game supplies, and sort them into piles. Bonus Barrel, Funky's Flights, and Bazaar's General Store cards should be face down and shuffled.
2. Each player receives a level checklist, listing each of the 142 levels, the resources required in order to build them, and their "!" difficulty. The page also includes a wish list where you can conveniently mark down any cards that you're hoping to try and get soon.
3. Each player selects a Kong character piece. (Details about the Kongs on page {}) Place each player's piece on the Start space.
4. Each player receives a total of $2430 in starting cash:

x5 each

x3 each

5. Each player receives a number of Extra Life bills according to their Kong's starting amount.
6. Decide which player will go first, give that player the checkpoint barrel (marks whose turn it currently is), and begin the gameplay sequence.

Gameplay Sequence

1. At the start of your turn, if you want, you can choose to do any of these 3 following things. These can be done in any order, as many times as you like:

- Spend a camera piece to copy 1 animal, environment, or resource card from another player. Take a new one from the supply, not from that player's inventory.
- Add an animal, environment, or resource to your own personal "scrapbook." In addition to building all levels, this is another requirement you have to complete before you can win the game. To add a card to your scrapbook (each player has a separate one), discard the card and check it off on your level checklist. (See Level Checklist section on page {} for more details) Unlike levels, scrapbooked cards are not lost if you lose all your lives.
- Build a level. This is what you'll be working towards during the entire game. With a few exceptions, you can generally-- build levels in any order you want, but there are some specific requirements:
    - Requirements
      To build a level, you need to have each of its required cards, listed next to it on the level checklist. For example, to build Coral Capers, you need to have a Coral Reef card, a Water card, and an Enguarde card. You also need to have a certain amount of money, from $50 to $350, according to which world the level is found in. When building a Lost World or Krematoa level, 2 bonus coins are also required.

- Paying
  Return the required cards to the supply. Pay the required cash to whoever has built this level first. If no one else has built it, pay it to the bank. For Lost World and Krematoa levels, pay the required 2 bonus coins to the bank.
- Getting "!" in regular levels
  In order to get 306% complete, you also have to have “found all of the secrets” in each level. In this board game, whether or not you happen to find all of the secrets in a level when you first complete it is determined randomly. When you build a level, roll a 6-side die.^ If your roll’s value is equal to or higher than the level’s “secret difficulty” (indicated by the number to the left of the level’s name), then you “find all of the secrets” in the level, and mark that on the checklist with an “!” in the box to the left of the secret difficulty number. (This means that you will always get “!” for levels with a secret difficulty number of 1, and never get “!” for those with 7.) If you don’t get “!” on your first try, then you’ll have to head to the Cranky’s Cabin of that world to get the “!” later on.
- Getting "!" in boss levels
  You can also get "!' for boss levels in exactly the same way, but instead of representing secret-finding, "!" represents defeating the boss without getting hurt. (Although this isn't a requirement when playing the *actual* DKC series, it is here for consistency between the levels.) The difficulty number in this case represents how tough the boss is to beat. If you don't get "!" for the boss, you "get hurt" and lose 2 cards of your choice.
- Getting "!" in final boss levels
  Final bosses will require you to get both an "X" and an "!". The "X" represents defeating the final boss, and the "!" represents doing so without getting hurt. However, you don't roll for these immediately when you build the level. Instead, you'll need to go to the proper space to fight K. Rool. (See page {} for the details for the King K. Rool, Kaptain K. Rool, and Baron K. Roolenstein spaces.)
- Rewards
  Once the level is built, find it on your level checklist to mark that you've built it:
  - In the 1st column, write its number, indicating what number level it is that you've built so far.
  - In the 2nd column, write a star if you were the first player to build this level.
  - The 3rd column is used for writing a check mark once you save your levels at Wrinkly's Save Cave.
  - In the 4th column, write a "!" once you've successfully received "!" for this level.

  If you built a boss level (except for Krocodile Kore and Knautilus), receive a bonus coin. If the boss level required 2 Boss cards, instead receive 2 bonus coins. Finally, when you build the level Stronghold Showdown, you also receive a Gunship card (which takes up no inventory space, and can't be bought, sold, traded, or lost in any way unless you get a game over or build K. Rool Duel).

2. Next, roll your Kong’s movement die and move your piece forward that many spaces. If there is a split in the path, choose either direction. You can only move along the path in the direction of the arrows.
3. If you don’t like the space you land on, you can spend a golden feather token to change the number of spaces you move by –2, –1, +1, or +2, but only if you didn’t land on a Lose a Life space.
4. If you pass over the Start space, you can choose to either save (see Wrinkly's Save Cave for more details) or receive an amount of money depending on your Kong. If you land on the Start space, do both of these.

5. Do something according to what kind of space you landed on:

- [animal/environment/resource] From the supply, collect a card for each animal, environment, and resource listed on the space.
- [token] Collect a token of the shown type from the supply.
- [bonus]*^ Draw a bonus barrel card according to the color of the space. This will cause something good or bad to happen to you or other players. If a card says that something will occur under some later condition, then keep the card out of the pile until that condition occurs. Also, receive an animal token. If you now have 3 animal tokens, immediately trade them in for 1 card of choice.
- [funky]* Draw 3 Funky’s Flights cards, which have the names of worlds on them. You can fly to any space in one of these 3 drawn worlds for $100. If you want to "land on" the space you fly to, meaning that the space's effects will apply, then you must instead pay $400.
  You can also play the Funky's Fishing minigame for a chance to get some prizes. You can do this before or after flying.
  - Pay $100 to the bank to play. Roll an 8-side die as your fishing hook.^ Then, roll a 6, 10, 12, and 20-side die all at once. For each die with a rolled value equal to or lower than your hook's value, you get the according prize. (You can get multiple prizes)
  - 6-side: $50
  - 10-side: $200
  - 12-side: Water card
  - 20-side: Token of choice
- [swanky2] You can play Swanky's Bonus Bonanza for a chance to get some prizes. Choose any number of the 3 games available:

- Level 1: Crazy Cards
  Pay $100 to the bank to play. Without looking, name 3 animal, environment, and/or resource cards the player to your left has. You can guess a card more than once, if they have more than one of them. If you're correct, you win 1 token of choice.
- Level 2: Loony Levels
  Pay $200 to the bank to play. Without looking, name the 3 most recent levels you've built. If you're correct, you win 1 card of choice.
- Level 3: Wacky Worlds
  Pay $300 to the bank to play. Without looking, name the exact spaces that each player's Kong is on, and the worlds they are in. If you're correct, then choose any space in a world that any player is currently in, and on your next turn, instead of your movement roll, you can land on that space.

- [swanky3] You can play Swanky's Sideshow for a chance to get some prizes. Choose 1 of the 2 games available:
  - Endurance
    Pay $250 to the bank to play. Keep rolling an 8-side die. If you roll a 1 at any point, you lose and don't get a prize. If you haven't gotten a 1, you can stop at any time to receive 1 prize equal to or lower than the number of times you didn't roll a 1:
    - 1 time: $100
    - 2 times: $200
    - 3 times: $300
    - 4 times: $400
    - 5 times: Token of choice
    - 6 times: $500
    - 7 times: Extra life
    - 8 times: $750
    - 9 times: Animal card of choice
    - 10 times: $1000
    - 11 times: Resource card of choice
    - 12 times: $1500
    - 13 times: Environment card of choice
    - 14 times: $2000
    - 15 times: Take Swanky's place in Endurance. When any other player plays it, they pay $250 to *you* instead of the bank.
    - 16 times: Game over, you can pick any 2 prizes.
  - Head to Head
    Free to play. You can select an opponent who has at least 10 cards to go against you in a high-stakes card wager game. Beforehand, each player can take a look at all cards their opponent has. Next, each player secretly selects between 3 to 10 cards to put up as their wager. Then, compare your wager with the opponent's, and calculate the sum of the cards' cash values. The player with the higher sum wagered receives all of the gambled cards.
- [bazaar]* Draw 4 Bazaar's General Store cards. Depending on the cards you draw, you can do these things:
  - Animal, environment, or resource card: Can buy up to 3 copies of this card for its listed price. Take these from the supply.
  - Item: Can buy this item to keep in your inventory to aid your on your adventure. Pay its price, listed in the bottom-right corner, and take this card directly from Bazaar. The number of inventory slots it uses up are listed in the bottom-left corner. You can drop an item at any time if you don't want it anymore, but you can only get money for it if you sell it when you're at Bazaar's again.
  - Other: If not a resource or item, read the card for more details.

  You can additionally do these things at Bazaar's store:
  - Sell any resource cards or items you have for their listed price.
  - Trade with other players, either for cards, money, tokens, items, or a combination. Other players cannot trade with each other on your turn, only with you.
  - Swap up to 3 of your tokens with tokens of a different type, at a cost of $100 each.

* For each of these spaces, once you're done with the cards you've drawn, put them face-up in the appropriate discard pile. Once there are no more cards left to draw from a pile, shuffle its discard pile to re-use.

- [cranky] This is where you can buy "tips" on how to "find all of the secrets" in levels, and how to "get good at beating the bosses." This is how to get the "!" for levels which you missed when you first built them. Cranky only provides tips on levels in his current world; for example, the only place to get tips for Jungle Hijinxs or the other Kongo Jungle levels is at the Cranky's Cabin space in Kongo Jungle. You can buy as many tips for that world's levels as you want. To buy a tip for a level, you need to have already built that level but not gotten "!" for it. Each level's tip costs $100 times the level's secret difficulty number. When you buy a tip, immediately mark the "!" for that level on your level checklist, to the left of its secret difficulty number. Finally, you can also give Cranky 1 token of any type (return it to the supply) to receive 1 extra life.
- [wrinkly] This is where you can "save your game" to protect against losing levels from a game over. When you arrive at a save cave, put a check mark in the 3rd column on the checklist for each level that you've built before arriving here. Levels

with a check mark cannot be lost due to losing all of your lives. Finally, you can also give Wrinkly 1 token of any type (return it to the supply) to receive 1 extra life.

- [lose a life] Lose 1 of your lives. If you are now at 0 lives, you must remove all unsaved levels that you've built. You lose all "!" for these levels, as well as any bonus coins or Gunship cards earned when you built them. Then, reset your lives back to your Kong's starting life count.
- [k rool] You can only enter a final boss space under these specific conditions:
    - Once you've built the level Gang-Plank Galleon and built all other DKC levels, you can go to the King K. Rool space to fight him to beat Gang-Plank Galleon.
    - Once you've built the level K. Rool Duel and built all other DKC2 levels besides the Lost World, you can go to the Kaptain K. Rool space to fight him to beat K. Rool Duel.
    - Once you've built the level Krocodile Kore and gotten "!" on all other DKC2 levels including the Lost World, you can go to the Kaptain K. Rool space to fight him to beat Krocodile Kore.
    - Once you've built the level Kastle KAOS and built all other DKC3 levels besides Krematoa, you can go to the Baron K. Roolenstein space to fight him to beat Kastle KAOS.
    - Once you've built the level Knautilus and gotten "!" on all other DKC3 levels including Krematoa, you can go to the Baron K. Roolenstein space to fight him to beat Knautilus.
    - (The prerequisite levels for these do not need to have been saved.)
    - Once you're on the space, you fight K. Rool. Keep repeatedly rolling a 6-side die until you either get a 1 or 6.^ On a 1, lose a life and end your turn. On a 6, you win the fight and receive "X" for that final boss level. If you defeated him on your first roll, receive the "!". The "!" can also be earned by buying a tip from Cranky (you need to have either built the K. Rool level or have fought him already, but doesn't have to be both). The world you can go to Cranky's Cabin in for each boss is as follows:
        - Gang-Plank Galleon → Chimp Caverns
        - K. Rool Duel → K. Rool's Keep
        - Krocodile Kore → Lost World
        - Kastle KAOS → KAOS Kore
        - Knautilus → Krematoa
    -

^ For any of these die rolls you have to perform, you can spend one banana bird per roll to change your rolled value by –3, –2, –1, +1, +2, or +3.

- [306%] You can only enter the finish space if you have all 142 levels on your level checklist checked off, and have achieved "!" for all of them. Nothing needs to be saved, though. When you arrive here, you win the game! The other players can decide if they want to stop, or keep playing to see who finishes 2nd or 3rd (in that case, you are removed from the game; return your cards, money, lives, tokens, and items to the supply).

6. After you have taken the appropriate action for your space, you have another opportunity to perform any of the actions listed in step 1 if you want to.
7. If your combined number of inventory slots taken up by your cards, tokens, and items is over your maximum inventory size (depends on your Kong), then you must now get rid of some until you're down to the maximum. (If you want, you're free to get rid of stuff below the maximum, too.)
8. Collect $20 for each token (camera piece, golden feather, or banana bird) that you still have in your inventory.
9. Finally, pass the checkpoint barrel to the next player (to your left), and they begin their turn.

Your level checklist is an essential tool for indicating how much you've progressed, seeing what levels you can build, and planning out your future strategy. Here's an example of what your level checklist might look like partway through the game:

- [1 √√ !]
- [2 √√]
- [3 √ !]
- [4 √]
- Indicates what cards you'll need to spend to build the level.
- Each level requires you to pay a bit of cash (and sometimes bonus coins), listed next to the world name.
- When you build all the levels in a world, you can check off the world's box.
- This list is just for your convenience.
- This list is for your convenience, and has multiple features. Each list (Environments, Resources, and Animals) has several useful columns:
    1. List of all card types
    2. Which games (DKC, DKC2, or DKC3) is this card type needed for?
    3. How many cards of this type are needed in total (to build all levels)? If you want to keep track of this, you can either count up from 0, or down from the max number.
    4. A wish list. If there happen to be any levels that you have almost all the cards for, you can write those last few cards you're seeking here, as a reminder. For example, if you have a Factory and a Squitter card, then you're one

away from building either of these levels. Or, if you have a Cliffs and a Ropes card, then you're one away from building either of these levels. In these cases, you could write in the wish list column as shown, and then erase those marks as soon as you get the cards you want.

5. Scrapbook. Place a check mark next to a resource when you've added it to your personal scrapbook (see step 1 in Gameplay Sequence, on page {}, for info on how to do this).

- Here, you can make note of some important information about yourself and the game.

Bonus & Item Details

- Bee Swarm
  Place the bee swarm 10 spaces behind a player. After that player's movement rolls, the bees move using an 8-side die and move toward that player. If they are caught by the bees, they lose a life and 5 cards of their choice, and then the bees are removed. The bees will disappear on their own after 3 turns of not catching the target player. During these 3 turns, the target player can't warp elsewhere on the board, but they can use speed-increasing items.
- Castle Crush
  If you have built Castle Crush, you get "!" for it. Otherwise, take one of its required cards. Then, each other player rolls a 20-side die. Any player who rolls a 1 gets their game corrupted, and loses their 4 most recent levels they've built.
  If you haven't built Castle Crush, take one of its required cards. If you have built it but haven't got "!", get "!". If you already have "!", take a golden feather. Then, each other player rolls a **10**-side die. Any player who rolls a 1 gets their game corrupted, and loses their **2** most recent levels they've built.
- DK Bongos
  Take the bongos from the Bonus Item pile. These help with your movement, as explained on the card. These take up inventory, so you can drop them at any time if you want.
  (entry removed since it's already explained on the item card)
- Dusty Photo
  Showing the photo you found to the rest of the Kong family, you learn that this is Donkey Kong's long-lost father, who fought in the great Kremean War. Dawned in full military attire, you are inspired by his fighting spirit and will automatically win "!" for the next boss level you build. You also lose a turn in memory of this great figure of simian history, but refill your lives to their starting amount if they are currently below.
- Green Ninja
  Donkey: "I think I'm destined to be the green ninja."
  Diddy: "No way bro, I'm totally the green ninja."
  Lanky: "OOK, I know the green ninja's gotta be me, dummies!"
  Sensei Cranky: "Shut up, none of you idiots are the green ninja. According to the prophecy, it will be Kip from DK Barrel Blast."
  Everyone: "But SENSEIIII…"
  All players simultaneously spin a 20-side die. The player whose die spins the longest takes the title of green ninja, master of the 4 elements, and can take 4 different green resource cards of choice.
- Kroctopus
  On your next movement roll, roll an 8-side, 10-side, 12-side, and 20-side, and the player to your right decides which one you will use. Maybe they'll be nice to you, but if not, perhaps their choice can be influenced if you offer them a little something…
- Mario vs. Donkey Kong
  Place Mario 25 spaces behind you. After your movement rolls, Mario moves using your die plus a 6-side die. If you are caught by Mario, lose 3 lives and warp back to the Start space. Mario will disappear on his own after 3 turns of not catching you, so if you manage to escape him, you can build any 1 regular level in any of the games' first 3 worlds for free (no money or cards). While running from Mario, you can't warp elsewhere on the board, but you can use speed-increasing items. Also during this time, whenever you land on Cranky's Cabin or Wrinkly's Save Cave, you receive 1 life for free.
  Place Mario **25** spaces behind you. After your movement rolls, Mario moves using your die plus a **8**-side die. If you are caught by Mario, lose **2** lives and warp back to the Start space **(no money, no save).** Mario will disappear on his own after **5** turns of not catching you, so if you manage to escape him, you can build any 1 regular level in any of the games' first 3 worlds for free (no money or cards). While running from Mario, you can't warp elsewhere on the board, but you can use speed-increasing items. Also during this time, whenever you land on Cranky's Cabin or Wrinkly's Save Cave, you receive 1 life for free.
- Mario vs. Donkey Kong 2: March of the Minis
  Using the diabolical Mini Marios, Mario attempts to purge all Kongs from the world. Place a Mini Mario 25 spaces behind each opponent. After each opponent's movement roll, the Mini Mario chasing them will roll using that opponent's movement die plus a 4-sided die. An opponent who's caught by a Mini Mario loses a combination of levels and turns equaling 3. A Mini Mario will disappear on its own after 3 turns of not catching its target player. An opponent who escapes their ensuing Mini Mario gains 3 resources of their choice. While running away, they can't warp elsewhere on the board, but they can use speed-increasing items.
  Using the diabolical Mini Marios, Mario attempts to purge all Kongs from the world, except for you, who managed to lay low. Place a Mini Mario **20** spaces behind each opponent. After each opponent's movement roll, the Mini Mario chasing

them will roll using that opponent's movement die plus a **6**-sided die. An opponent who's caught by a Mini Mario loses a combination of lives and turns equaling **2**. A Mini Mario will disappear on its own after 5 turns of not catching its target player. **Opponents get no reward for escaping their Mini Mario.** While running away, they can't warp elsewhere on the board, but they can use speed-increasing items. **If all Mini Marios successfully catch their target, you get 1 card of choice from the supply per opponent.**

- Mario vs. Donkey Kong 3: Mini-Land Mayhem
  Mario returns to get revenge on you for "stealing" Pauline! (Actually she's just chilling with you for a fun day out.) But, you have a chance to fend off Mario and the Minis by building as many levels as you can. Place a Mario-and-Minis conglomerate 50 spaces behind you. After your movement rolls, he moves using your die plus a 6-side die. If you are caught by him, Mario will make you suffer… For 5 turns, your inventory is decreased by 5 and you cannot build levels. Mario will only disappear if you can build 5 levels before he catches you. If you manage to escape him, you gain Pauline as an ally (take the Pauline card from the Bonus Item pile). While running away, you can't warp elsewhere on the board, but you can use speed-increasing items.

Other Important Notes

- The spaces for King K. Rool, Kaptain K. Rool, Baron K. Roolenstein, “306% complete,” and the starting Wrinkly’s Save Cave are not located in any world.
- The spaces for King K. Rool, Kaptain K. Rool, Baron K. Roolenstein, and “306% complete,” are landed on whenever they are reached; the exact number from a die roll is not needed to land on them.
- Players are never forced out of the game. But, if someone wants to quit, they should remove their player piece and return all of their money, cards, and tokens to the supply.
- Loaning and owing money are not allowed, including both from other players and from the bank. You are not allowed to make any purchases if doing so will cause you to have less than $0.
- Trading cards, money, tokens, or items is not allowed except for with a player who has just landed on a Bazaar’s General Store.
- Trading lives is not allowed except for when a player buys an "Extra Life" item at Bazaar's General Store.
- Trading levels, checking off levels without the correct requirements (cards, money, or bonus coins), or unchecking levels unless required to do so by a bonus card or getting a game over, are never allowed.
- If the bank does not have any more money, simply do not take money when certain spaces or cards instruct you to. If you are told to receive money but there is not the correct kind of bill to do so, round down.
- If you are receiving or buying a certain card or token of which there are none left in the supply, take one from the player who has the most. If it's a tie, take from closest on your left. When you take a card in this way, pay its listed price to the player you took it from. For a token, pay them $100.
- If you draw the ANY bonus barrel card that forces you to destroy a level, there’s no need to re-number every level in the list. A more convenient method is to put a certain note by the next level you build. For example, if you have 58 levels and you choose to destroy level 23, then you could write the next level you build as “58b.” Or, you could write the next level you build as “23,” but this gives an inaccurate representation of the order in which you built your levels.
- **After you obtain a 3-time use item and use it 1 time, if you then sell it to another player, it's not refilled to its max uses; the new owner starts with 2 uses. However, if it ends up in the discard pile, all uses are refilled.**

Alright, that’s enough! Let’s get this darn game over with while I’m still young.
