The Donkey Kong Country Board Game

Designed by Justin and Joshua Patrick, 2011-2026. Version 5.0
Donkey Kong Country series by Nintendo and Rare.

Prepare for a thrilling strategic adventure as you travel across Donkey Kong Country, while competing to collect resources in order to build every single one of the SNES/GBA trilogy's 142 levels. You must wisely choose your player character, carefully determine when and which of your items and cards to use or drop, bargain with other players, and anticipate upcoming disasters. Thorough knowledge of the video games is not necessary (there are no trivia questions, etc.), but it can help a bit.

The ultimate goal is to reach the Finish space, "306% Complete". But in order to go there, you must build every level, find each level's secrets, complete Queen Banana Bird's quest, give K. Rool a whoopin' in 5 different fights, and find time to finish your homework on top of it all! This guide will attempt to explain the rules of the game as thoroughly as possible, divided into sections detailing the various features.

Supplies

General

Game board
Box (3 drawers)
1 level sheet per player (2 to 4)
Checkpoint barrel
10 stars
coin (Chunky Kong = heads, Kritter = tails)

Bills

542 bills:

- **415 cash bills (9 types):**
  - 40 banana coins ($5)
  - 40 banana bunches ($10)
  - 120 KONG letters ($20)
  - 40 Kremkoins ($50)
  - 60 1up balloons ($100)
  - 40 2up balloons ($200)
  - 40 3up balloons ($300)
  - 20 DK coins ($1000)
  - 15 giant bananas ($5000)
- **127 other bills (4 types):**
  - 40 extra lives
  - 60 bonus coins
  - 12 animal tokens
  - 5 fake 3up balloons ($300)

Standard tokens

80 tokens (4 types):

- 20 camera pieces
- 20 golden feathers
- 20 banana birds
- 20 crystal coconuts

Dice

129 dice:

- **105 number dice:**
  - **66 in standard sets (4, 6, 8, 10, 12, 20-side):**
    - 6 brown (Donkey Kong)
    - 6 red (Diddy Kong)
    - 6 pink (Dixie Kong)
    - 6 cyan (Kiddy Kong)
    - 6 light purple (Tiny Kong)
    - 6 orange (Lanky Kong)
    - 6 green (Chunky Kong)
    - 6 dark blue (Taj)
    - 6 yellow (Xananab)
    - 6 chartreuse (Klubba)
    - 6 dark purple (VoidCo)
  - 28 black (Kremling Krew / K. Rool / general: 3, 4, 5, 6 x7, 7, 8, 9, 10 x2, 11, 12, 13, 15, 16, 17, 19, 20, 21, 24, 30, 60, 100-side)
  - 1 scarlet: 20-side
  - 2 lime: 4, 6-side
  - 1 dark brown: 4-side
  - 3 white: 6, 8, 10-side
  - 4 light blue: 6, 10, 12, 20-side
- **24 other dice:**
  - 1 sticker die
  - 1 6-color die
  - 1 ghost die
  - 16 letter dice
  - 5 poker dice

Character cards

16 character cards (for 12 characters):

- Donkey Kong
- Diddy Kong
- Dixie Kong
- Kiddy Kong
- Tiny Kong
- Lanky Kong
- Chunky Kong
- Taj
- Xananab

Klubba
2 for VoidCo:
VoidCo
Odd Rock
4 for Kremling Krew / K. Rool:
Kremling Krew
King K. Rool
Kaptain K. Rool
Baron K. Roolenstein

Ability cards

236 ability cards:
170 solo:
156 for 12 characters:
11 Donkey Kong
12 Diddy Kong
11 Dixie Kong
13 Kiddy Kong
12 Tiny Kong
11 Lanky Kong
12 Chunky Kong
16 Taj
13 Xananab
15 Klubba
14 VoidCo
16 Kremling Krew / K. Rool (3 types):
2 Kremling Krew only
10 K. Rool only
4 both
14 gray
66 duo (1 per character combo)

Music notes

56 music note pool cards (8 types):
8 C
8 D
6 E
6 F
9 G
9 A
4 B
6 rainbow
385 music note supply cards (13 types):
45 C
20 C#/Db
35 D
20 D#/Eb
30 E
30 F
25 F#/Gb
35 G
20 G#/Ab
40 A
30 A#/Bb
25 B
30 rainbow

Material cards

438 material cards (3 categories):
74 animal cards (12 types):
3 Clapper
7 Ellie
11 Enguarde
4 Expresso
2 Glimmer
5 Parry
4 Quawks
8 Rambi
5 Rattly
11 Squawks
10 Squitter

4 Winky

148 environment cards (30 types):

2 Altar
7 Banana Hoard
4 Barn
4 Beehive
4 Brambles
5 Castle
9 Caves
6 Cliffs
8 Coral Reef
4 Docks
6 Factory
5 Forest
6 Glacier
2 Gunship
5 Ice Cave
9 Jungle
2 Library
7 Mines
5 Pipes
5 Rigging
4 River
5 Scaffolding
4 Ship Deck
4 Ship Hold
4 Swamp
3 Temple
3 Theme Park
7 Trees
4 Volcano
5 Waterfall

216 resource cards (26 types):

5 Balloons
11 Barrel Cannons
14 Barrels
14 Boss
7 Carts
10 Chase
8 Conveyors
5 Doors
7 Drums
4 Electricity
10 Fire
15 Gauntlet
4 Ghosts
10 Hooks
4 Krockheads
7 Lights
4 Millstones
4 Mincers
7 Poison
5 Rising Danger
14 Ropes
9 Spawners
9 Storm
7 Tires
15 Water
7 Wind

Other cards

1488 other cards:

424 bonus cards (5 types):

90 DKC bonus
90 DKC2 bonus
90 DKC3 bonus
120 ANY bonus

- 34 K. Rool's Krap
- **591 family & friends cards (8 types):**
  - 54 Cranky racers
  - 23 Funky worlds
  - 10 Funky special worlds
  - 142 Candy songs
  - 80 Wrinkly homework assignments
  - 42 Swanky quizzes
  - 68 Bazaar shop materials
  - **172 in shop item deck:**
    - 155 shop items
    - 17 shop gray cards
- **286 other item cards (5 types):**
  - 55 bonus items
  - 48 ability items
  - 69 utility items
  - 114 special materials
  - 12 fake materials
- **101 Kremling Krew cards (6 types):**
  - 4 filler
  - 1 core (Kritter)
  - 18 DKC
  - 25 DKC2
  - 34 DKC3
  - 19 boss
- 54 casino playing cards
- 20 blank cards

Special pieces

- **306 special pieces:**
  - 50 standee bases
  - **21 for 12 characters:**
    - Donkey Kong
    - Diddy Kong
    - Dixie Kong
    - Kiddy Kong
    - Tiny Kong
    - Lanky Kong
    - Chunky Kong
    - Taj
    - Xananab
    - Klubba
    - **7 for VoidCo:**
      - Grumpy Kong
      - Grumpy Kong outline
      - Poppy Kong
      - Poppy Kong outline
      - Void Kong
      - Void Kong outline
      - Odd Rock
    - **4 for Kremling Krew / K. Rool:**
      - Kremling Krew
      - King K. Rool
      - Kaptain K. Rool
      - Baron K. Roolenstein
  - **150 for character abilities:**
    - **2 for Donkey Kong:**
      - banana hoard
      - Rabbid Cranky
    - **2 for Diddy Kong:**
      - 2 banana peels
    - **2 for Tiny Kong:**
      - 2 Monkeyports (flat)
    - **1 for Lanky Kong:**
      - grape
    - **5 for Chunky Kong:**
      - 5 pineapples (flat)
    - **41 for Taj:**
      - oil slick

- bubble
- golden Taj monument
- 5 power-up tokens (tokens)
- 27 power-up track markers (tokens)
- 5 Zippers (flat)
- Wizpig

2 for Xananab:

- Xananab Jr.
- banana ship

48 for Klubba:

- 7 toll booths
- 2 warp barrels
- 4 K. Rool's Krap spaces (flat)
- 20 bogged tokens (flat)
- 2 spike pits
- 2 honey patches
- 2 electricity poles
- lava pit
- Snapjaw
- 3 trap doors
- 2 ghost barrels
- giant boulder
- Kudgel

21 for Kremling Krew / K. Rool:

- spinner (spinner)
- Kackle
- 13 Lurchins (card stands)
- Swoopy
- Karbine
- crown
- Spikeball
- prison cage (card stand)
- remote control (card stand)

25 for gray abilities:

- 24 number tokens (tokens)
- number token bag (bag)

1 for duo abilities:

- gentle Chunky statue

21 for bonuses:

- Super Wario
- 5 Flitters
- mirror
- 9 old Krematoa spaces (flat)
- Mario
- 3 ancient record pieces
- Goomba's roulette wheel

25 for items:

- B. Locker
- cage
- giant banana peel
- golden banana
- Mini DK
- Koopa hotel
- balloon stall
- green banana
- cannonball
- Mini Car
- 3 blazing bananas
- Big Bessie
- evil barrier
- Professor Chops's checkpoint booth
- continue point
- getaway
- closet
- ice maker
- Harambe memorial
- 3 item boxes
- Funky plane

8 for songs:

- millstone Gnawty
- King Zing
- web
- Clapper ice sculpture (card stand)

- Sneek
- 3 hidden bonus barrels

31 for final bosses:

- King K. Rool
- 2 Kaptain K. Rools
- 2 Baron K. Roolensteins
- 10 cannonballs (flat)
- 6 geysers
- 10 fireballs (flat)

Guides

39 guides:

- Music Pool
- Kiddy Pool
- 10 special worlds
- 5 final bosses

Cranky: You know what they call people who've got this much needless junk? *Hoarders*. …Who, me? Don't be silly, the stuff in my cabin is carefully curated.

Gameplay Overview

Before we get into the nitty-gritty, take a look at this section to get a high-level 101 of what kinds of things you'll be doing during the game:

Taking turns and moving

As in Monopoly, players take turns: on your turn, you roll the dice, move a number of spaces, and perform some action depending on what you land on. In this game, there are about a dozen types of spaces you can land on, so it won't be as simple as buying a property or paying rent. See page ## for a list of what each space can do.

Additionally, there are places on this game's board where the path splits and rejoins; at a path split, you have the option of picking between multiple space types. Choose wisely! All paths are 1-way, so check for arrows at path splits to see which directions are allowed.

Picking things up

Many spaces on the board will reward you with several materials when you land on them. For example, if you land on a space with "Enguarde" on it, look in the supply for an Enguarde card and put it into your "inventory".

Your inventory is basically your collection of material cards and other helpful stuff your character is carrying around the board. Be careful, as there is a maximum amount of stuff you can hold (depends on your character) - if you pick up too much stuff, you'll have to drop some when your turn ends.

In addition to level material cards, other things that take up space in your inventory include tokens (such as camera pieces) which you pick up from token spaces, items you buy from Bazaar's General Store, and sometimes rare bonus items you get from a bonus space or ability items specific to your character. Your character card, ability cards, cash, and anything else not mentioned here doesn't take up any inventory space. For more details on the inventory and supply, see page ##.

Building levels

Why are the Kongs and other characters picking up materials? To build levels, of course. Building all the levels in the DKC trilogy is the primary goal taking up your attention in this game. To build a level, you need its required material cards in your inventory, plus a certain amount of cash (and sometimes some bonus coins). The requirements for each level are listed on your level sheet (see page ##). Materials come in 3 categories: environments (usually 1 per level), resources (1 or several per level), and animals (only in about half of the levels). In each category, there are many "types" of materials: for example, Jungle, Caves, and Coral Reef are some of the environment types.

In addition to building each level, you also have to get each level's "exclamation point", a.k.a. "!" - for regular levels, this represents finding all of its secrets, and for boss levels, it represents defeating the boss. Usually when you build a level, you'll roll a die to see if you were skilled enough to get "!" on your first try. If you miss, you'll have to visit wise old Cranky Kong to get help later on (or get a lucky reroll from a bonus space).

Cranky: "Wise"... I like that. Nice to get an ounce of respect once in a while. Could do without the "old", though.

Should you aim to build the biggest levels first? Smallest? Ones that other players haven't built yet so you profit off of them? Whatever's convenient for you at the moment? It's all up to you. But don't delay - you have 142 to build! More details about level-building are on page ##.

Reacting to bonus events

Just like chance cards in Monopoly, there are bonus spaces in this game that will interrupt your level-building aspirations with some crazy events, sometimes good, sometimes bad. Cards will often instruct you to gain or lose physical things like money or materials, or sometimes make you lose your next turn. Other cards make players warp around the board, gain new items, recruit enemies to attack opponents, set timers for an event to happen after a certain number of turns, and much more.

Using family and friends' spaces

Besides spaces for materials, tokens, and bonuses, there are spaces for several family members and friends eager to assist you on your journey. Cranky can help you find levels' secrets, Funky can fly you around the board, Candy can help you with saving, abilities, and music, Wrinkly will give you new homework assignments to complete, Swanky offers special minigames to play, and Bazaar lets you buy, sell, and trade stuff. In-depth details on all these spaces can be found on pages ## to ##.

Losing lives and saving levels

It's not only a long road, but a dangerous one, too. Your character starts with a certain number of lives. If you lose all your lives (by landing on a Lose a Life space, or due to some effect from a bonus, etc.), you get a "game over" and you lose several unsaved levels, just like when playing the actual DKC video games. "Game over" doesn't mean you're eliminated from the game; you do keep playing. But it's still something you should avoid... Losing a level means it gets un-built, and you'll have to build it again from scratch! See page ## for the painful specifics.

At Candy's space, she can help you save your built levels. Once you've saved a level, you never have to worry about losing it from a game over. You don't have to save all your levels to win the game, but it's good if you want peace of mind. Additionally, there are opportunities to buy extra lives at some of your Kong family members' spaces.

Using tokens and items

The 4 token types (camera pieces, golden feathers, banana birds, and crystal coconuts), as well as items you get from Bazaar or through bonuses, can be utilized to perform special actions. They can earn you materials you're looking for, land on specific spaces you want, steal opponents' stuff, or sometimes even get free levels. See page ## for details on tokens, or page ## to learn about items.

Using your character's abilities

Similarly to token/item effects, every character has a set of their own personal abilities which can come into play. Some abilities will help you out, while others are burdens you have to deal with. At the start of the game, each player picks out an ability "loadout" by choosing some of their character's ability cards; each card has a number on it, and these must add up to a certain point total that gets better the farther you get in the game. See page ## for details on how to manage these.

Be sure to keep in mind the time that an ability can activate (like when you land on a certain space, or when you build a level) and follow its effect once that time comes. At Candy's, you have an opportunity to switch up your ability loadout to whatever might be strategically useful at the moment.

Helping Queen Banana Bird

Queen Banana Bird's children have been scattered across Donkey Kong Country, and being the generous gorilla you are, you've agreed to help bring the banana birds home to her. You can't win the game until you've brought 20 birds to her space in the center of the board; once you do, after you've beaten K. Rool, she'll swoop in and make sure he never troubles you again. (He'll still trouble the other players, though.)

Doing your homework

Aren't you setting aside some time to keep up with your studies? Another requirement before you can finish the game is to graduate Wrinkly's Kong Kollege. She has 2 major projects for you: first, add every level material in the game to your personal scrapbook. Second, complete a variety of random homework assignments you can pick up from Wrinkly's space. For details on these, see page ##. (Thank goodness you don't have to write essays or do presentations in front of the class.)

Making music

One of the most beloved aspects of the DKC video games, the groovin' soundtrack, finally makes an appearance as a game mechanic too! You can collect music notes to build songs, each of which can contribute to the 200 combined points you need for homework plus songs, as well as give you a special effect if you equip it - it'll be music to your ears. Check out page ## for more notes about notes.

Fighting K. Rool

You have to fight the villainous K. Rool 5 times to fully complete the DKC trilogy of video games, and likewise, you have to beat him in 5 different fights in this board game. Each K. Rool fight has prerequisites before you can enter: you need to have either built all of a certain group of levels, or gotten all of a group of "!"s. For details about these fights, see page ##.

———

Complicated enough for you? You're just getting started, little monkey. In the next sections you'll find specific details and rules about the game's characters, spaces, and other features. Read them thoroughly if you want, or just refer back to them whenever you need to.

Setting Up the Game

1. Make sure you have all the game supplies, and sort them into piles. In the supply list, each draw pile with a [Shuffle] symbol should be shuffled.
2. Lay out the game board, general dice (used for Funky and Swanky minigames), cash, music notes, and the music pool mat, but keep other things in the box until they're needed.
3. Each player receives a level sheet, listing each of the 142 levels, the requirements to build them, and their "!" difficulty. This page also includes a list of all materials, plus information about your homework and music, Queen Banana Bird's quest, ability thresholds, and final boss progress.
4. Each player receives a total of $2425 in starting cash: 5 $5, 5 $10, 5 $20, 5 $50, 5 $100, 3 $200, 3 $300
5. Each player chooses a character (details about those on page ##). Place each player's character piece on the Start space.
6. Each player takes all the dice, extra lives, and extra pieces they need that are associated with their character.
7. Each player chooses their initial ability loadout (which should sum up to -1 points at the game's start), and set them up as needed.
8. Decide which player will go first; if you want something to decide it, go with whoever last ate a banana or something banana-flavored. Give that player the checkpoint barrel, to mark whose turn it currently is.
9. Start a new session in the digital program, enter info as needed, then begin the gameplay sequence.

Turn Sequence

1. At the start of your turn, you can build as many levels as you want (as long as you fulfill their requirements). This is what you'll be working towards during the entire game (more details on page ##). You can also use camera pieces (page ##), some items, and some character abilities at this time.
2. Next, roll your character's movement die and move your piece forward that many spaces. If your character rolls multiple dice at once, roll them both and add them together. If you reach a split in the path, choose either direction. You can only move along the path in the direction of the arrows.
3. If you don't like the space you'd land on, can spend a golden feather token to change your movement roll by -2, -1, +1, or +2, but only if you didn't land on a Lose a Life space (see page ##).
4. If you pass over the Start space, you can choose to either save your game, receive money (amount depends on your character), or sometimes other ability-specific options. If you land on the Start space, do all of these (plus treating it as landing on Candy).
5. Do something according to what kind of space you landed on. For an overview of these, see page ##.
6. After you've taken the appropriate action for your space, you have another opportunity to build levels and/or perform any of the actions listed in step 1 if you want.
7. If your combined number of inventory slots taken up by your cards, tokens, and items is over your maximum inventory size (depends on character), then you must now get rid of some until you're down to the max. (If you want, you're free to get rid of stuff below the max, too.)
8. From the bank, collect $20 for each token (camera piece, golden feather, banana bird, or crystal coconut) that you still have in your inventory.
9. Finally, pass the checkpoint barrel to the next player (to your left), and they begin their turn.

Space Types

These are all the types of spaces you'll encounter on the main game board. You may find a few types besides these in certain rare cases, such as when you venture into special worlds or final boss arenas. If you do, those spaces will be explained there.

Name	***Basic effect***	***More details***
Material	Get material cards to build levels	[Rulebook: ##]

Token	Get a token for income and special effects	[Rulebook: ##]
Bonus	Draw a bonus card for unique events	[Rulebook: ##]
Cranky's Cabin	Buy "!" tips, start an Expresso race, swap tokens, gain lives	[Rulebook: ##]
Funky's Flights	Fish for prizes, fly to another world	[Rulebook: ##]
Candy's Save Point	Save levels, swap abilities, draw or turn in songs, gain lives	[Rulebook: ##]
Wrinkly's Kong Kollege	Draw or turn in homework, contribute to scrapbook, gain lives	[Rulebook: ##]
Swanky's Bonus Bonanza	Play endurance, quiz, or casino for prizes	[Rulebook: ##]
Bazaar's General Store	Buy/sell/trade materials and items	[Rulebook: ##]
Lose a Life	Lose a life, potentially lose levels	[Rulebook: ##]
K. Rool's Krap	Draw a K. Rool's Krap card for evil events	[Rulebook: ##]
Start	Start here, gain money or save whenever you reach it	[Rulebook: ##]
Queen Banana Bird	Contribute banana birds to your goal of 20	[Rulebook: ##]
Final Boss Entry	Enter a final boss arena	[Rulebook: ##]
306% Complete	Finally win the game here, locked until you've finished everything else	[Rulebook: ##]

Note: Queen Banana Bird and the final boss entry spaces are unique in that you land on it whenever you reach it; the exact number from a movement die roll is not needed to land on it.

Building Levels

Building all the trilogy's levels is what you'll be working towards throughout the entire game. You can usually build levels in any order you want, as long as you have the required stuff for it (listed next to that level on the level sheet) and spend all of it at once. Follow these things:

Cards	Each level requires several material cards - pay 1 of each of these to the supply all at once. (For example, Coral Capers requires a Coral Reef, Water, and Enguarde.)
Cash	Pay some cash; the amount depends on what world the level is in (look for "Level cost" on the level sheet). This usually ranges from $100 to $400. If someone else has already built that level (they have a "star" for it), pay the cash to that player; otherwise, to the bank.
Bonus coins	If it's a Lost World or Krematoa level, you must pay 2 bonus coins. If you build a boss level, you should receive a bonus coin, unless it was Necky's Revenge (take 2 bonus coins), or Krocodile Kore or Knautilus (don't receive any).
Number	To mark that you've built this level, find it on your level sheet and write a number in the first column. (The first level you build will be "1", the last will be "142".) Also make sure to mark in the digital program that you've built the level, by clicking the first column for it.
Star	The 4 narrow boxes are where you can mark who's built this level so far, and who did it first. Each player gets one particular column. Whenever someone builds a level, fill in their column on your sheet; if they were the first to build that level, put a "star", or otherwise a "2", "3", or "4" if they were the 2nd, 3rd, or 4th to do so. This is important mainly for the cash-paying (see above).
Saving	If you ever save this level at Candy's (or from reaching Start), put a checkmark in the "checkmark" column.
"!"	Right after you build a level, roll to see if you get "!" for it (meaning finding all its secrets, or defeating its boss): ● Roll a 6-side die: if the value is equal to or higher than the level's "secret difficulty" number, you win the roll and can write a "!" in that column. If you fail, you'll have to buy it later at Cranky's Cabin (see page ##), or try re-rolling it when you land on a bonus space (page ##). ● If you build a boss level and fail its "!" roll, you must lose a life or 2 slots of stuff. ● If there's no "!" difficulty listed, that means it's a final boss level - can't do a normal "!" roll. Instead, mark its "!" when you go to its final boss arena and win the fight there against K. Rool (page ##).

Note: Some bonus cards, items, etc. are marked with a [Shortcut] symbol and let you take a "shortcut" to skip certain requirements when you build a level. Alternatively, some effects will add or change the requirements for yourself or other players. In this case, write a note next to that level on the level sheet.

Your Level Sheet

Sometimes referred to as the "level checklist", this is an essential tool for indicating how much you've progressed, seeing what levels you can build, and planning out your future strategy. Here's an example of what your sheet might look like partway through the game:

Use these columns to indicate your current building status for each level:
1. Once you build a level, here you should write what number level it is for you. (The first level you build will be 1, final level will be 142.)
2. These 4 narrow boxes are where you can mark who's built this level so far, and who did it first. Each player gets one particular column. Whenever someone builds a level, fill in their column on your sheet; if they were the first to build that level, put a "star", or otherwise a "2", "3", or "4" if they were the 2nd, 3rd, or 4th to do so. This is so you can see who to pay when you build it.
3. Write a checkmark here if you save the level at Candy's.
4. Write a "!" here when you successfully get "!" for this level (meaning you "found all its secrets" or "beat its boss"). The number in the box is its "!" or "secret" difficulty (you need to roll this number or higher).

This shows what material cards you'll need to spend in order to build this level.

Each level requires you to pay a bit of cash (and sometimes bonus coins), listed next to the world's name.

When you build all the levels in a world, you can check off the world's box, and likewise if you've saved all its levels or gotten all its "!"s.

A boss level earns you an extra prize when you build it, listed here as a reminder: usually 1 bonus coin, sometimes 2.

This number is the level's "code", useful for quickly referencing a level in the list if you're not as familiar with every level's name and position in the whole series.

If the requirements for a level get modified by a bonus, ability, etc., cross things off or write notes next to that level as needed.

[Player Info] Here you can make note of some important info about yourself and the game as a whole.

[Ability Tiers] Check off a box when you've built that many levels. The "Ability Point Max" indicates how many points your equipped character abilities are allowed to sum up to (higher is better).

[Abilities Purchased] If you buy your instrument ability or gray abilities at Candy's, write them in this list. If you unequip then re-equip them in the future, you don't have to pay crystal coconuts again.

[Homework] In this list, write the names and point rewards of homework assignments (from Wrinkly) and songs (from Candy) when you complete them. You only need 200 points to get your diploma, not fill out every line in the list. You can either use separate columns (1 for homework, 1 for music) or combine them, your choice; only your total points matter.

[Banana Birds Returned] Write tallies here for how many banana birds you've rescued and brought back to Queen Banana Bird, out of a total of 20. Similarly, when you do the 5 K. Rool fights, mark your damage you've dealt to him using tallies in these boxes.

This materials list is for your convenience, and has multiple useful columns:
1. All card types in this category.
2. Which games (DKC1, 2, or 3) is this card type needed for?
3. How many cards of this type are needed in total (to build all levels)? If you want to keep track of yours remaining, you can either count up to the max or down to 0.
4. This shows your scrapbook completion. Write a checkmark next to a material when you've added it to your personal scrapbook (see page ## for more details).

Game Mechanics

Types of supplies

You'll interact with all kinds of paper, wood, and plastic pieces every turn. Many things are part of your "inventory" (collection of all things you own as a player), with some of those taking up some of your limited inventory slots. Other things, though, are simply present on the board or in the box, not owned by any player. Here's most of the important ones to be aware of:

Name	***What it's used for***	***Main way to get it***	***Part of inventory?***	***Takes up inventory space?***	***Can be dumped freely or traded?***
Material card	Building levels	Land on a material space	Yes	Yes	Yes
Token	Gaining income, special 1-time effect	Land on a token space	Yes	Yes, and has own max	Yes

Item card	Unique helpful effect	Buy at Bazaar's, get from a bonus, some abilities, or special worlds	Yes	Yes	Yes
Cash	Paying for things	Reach start, income from tokens, reward from minigames, or payment from other players when they build levels	Yes	No	Yes
Animal token	Trade in 3 for a card of choice	Land on an ANY Bonus space	Yes	No, but has own max	Yes
Music note	Working on songs	Land on material spaces when you have instrument ability equipped, or visit Candy	Yes	No, but has own max	Yes
Extra life	Protecting against game over	Give tokens to Cranky/Candy/Wrinkly, reward from minigames	Yes	No, but has own max	Yes
Bonus coin	Building Lost World and Krematoa levels	Build Boss levels	Yes	No	No
Character card	Stat overview	Choose 1 at start of game	Yes	No	No
Ability card	Explaining ability	Choose at start of game, or swap in Candy's	Yes	No	No
Duo ability card	Explaining team mode ability	Get 1 at start of game depending on characters	Yes	No	No
Minion card	Kremling Krew abilities	Draw each turn when playing as Kremling Krew	Yes	No	No
Dice	Random number, or counter	Associated with each character, some bonuses, items, etc.	No	No	No
Bonus card	Unique event	Land on a bonus space	No	No	No
Racer card	Expresso racing	Start a race at Cranky's	No	No	No
World card	Funky's Flights	Fly with Funky from his space	No	No	No
Song card	Working on songs	Pick one up at Candy's	No	No	No
Homework card	Working on homework	Pick one up at Wrinkly's	No	No	No
Casino playing card	Blackjack at Swanky's	Play blackjack at Swanky's casino	No	No	No
Bazaar material card	Buying multiple copies of a material	Draw 1 (or 2) at Bazaar's	No	No	No
Special pieces	Marking spots on the board (or supply) that trigger some effect	Associated with some abilities, items, bonuses, etc.	Sometimes	No	No
Stars	Marking a specific spot you want to remember	Anytime, usually with a particular item, bonus, etc.	No	No	No
Quick guides	Remembering game mechanics	Anytime, usually when you're going to interact with that game feature	No	No	No

How the supply works

Nearly all the supplies for the whole board game can be stored and conveniently accessed in "the box", a tower of 3 drawers. Take a look:
[diagram of box]

- These labels show what categories of things are placed into each drawer.
- Each drawer has many labelled slots that are the exact size and shape for that type of card or other supplies to fit there.
- Each stack is placed upright to save space, rather than being laid flat. Shuffled piles should be "face-down" (back visible), with a blank card at the back of the stack so it's not accidentally seen when viewing from a backward angle.
- When you discard a card that came from a shuffled draw pile, put it in the proper discard pile, located directly in front of the draw pile with an adjustable slider in-between (to fit the growing discard pile as the draw pile shrinks). When there's no more cards to draw from a pile, shuffle its discard pile to use as a new draw pile.

- Quick guides can be stored in the section they belong to, such as putting the card that explains Candy rules at the back of the Candy draw pile or discard pile. Or if you prefer, can put all quick guides together; some are generic, such as token rules, so they have their own dedicated section anyway.
- Top drawer: Contains materials and special materials.
- Middle drawer: Contains friends & family space cards, bonus cards, and duo abilities. Has space to store music note pool cards between games (during games, they go on the table).
- Bottom drawer: Can be turned backwards so it doesn't push pieces off the board when sliding open. (Even though being backwards makes it slightly harder to reach, it's fine since it's not accessed very often.) Contains characters, abilities, dice, special pieces, and other types of items besides Bazaar shop items. Has space to store cash and other bills, as well as music note supply cards, between games (during games, these go on the table).
- The Bazaar shop mat, special worlds, and final boss arenas can fit in any drawer between games, but you may want to stack them on top during a game so they don't cover up cards inside the drawers.
- The folded game board is a tiny bit too big to fit inside a drawer, but fits comfortably on top of the tower when not in use.

Cranky: Or you could spread a hundred piles all across the table like an uncivilized baboon - that's what they did in the old days.

Some other general things to be aware of about the supply:

[$100] "The bank" is just another name for the set of all cash in the supply which isn't currently held by any player. If you need to receive money from the bank and there isn't enough (or there aren't small enough bills), take as much as you can up to that amount.

[banana hoard] You can't get away with hoarding all of a certain card type:
- If someone needs to receive a certain thing from the supply (material card, music note, item, etc.) and there's none left, they should take one from whichever player has the most (taker's choice, if it's a tie) and pay that player cash equal to that thing's value, if it has any. This anti-hoarding condition happens [Priority] even if that thing is in something like an Offshore Banana Hoard that would normally protect it.
- If you have half or more of all the existing copies of a card, and you need to receive one from the supply but there's none left there, you can't take it. [Priority] Spend the ones you've got first!
- However, if a card says you're only allowed to own 1 of it (such as Big E/R/A, or the guide books), you ***can*** steal somebody else's, but it gets discarded immediately.

[trash] "Dropping" or "dumping" something from your inventory means it goes back to the supply. If a bonus, ability, etc. forces you to drop X slots' worth of stuff from your inventory, you're allowed to drop more (for example, if told to drop 1 slot of stuff, could drop a 2-slot item).

Organizing your inventory

What's the best way to manage everything you have in your limited table space? Every player has their own style and preferences, but here's an example of how yours might look:
[diagram of inventory]
- Bills grouped by type
- Tokens
- Music notes (could have these in order for the song you're working on, unless you're worried about someone deducing the song)
- Material cards grouped by ones that can potentially go together in levels
- Items
- Make sure to keep track mentally of how many open inventory slots you have left.
- Character and ability cards (unequipped ones hidden below)
- Personal dice and special pieces
- Level sheet
- Computer for the digital program

Special pieces

Standees

These are thick cardboard rectangles that get stood upright by placing them in a standee base. You'll most often use them to represent everybody's playable characters (called a "player piece" or "character piece"), but they often depict other non-playable characters, helpers for your abilities, or items that should stand out as clearly visible in some location on the board. Most of them can be moved in a similar way to moving a character piece, following the same rules for going along paths. If you need to place a stand-up piece and there aren't any more bases left in the supply, still place the piece, just lay it flat.

Flat pieces

These are made of the same material as standees and get placed on the board in the same way, but sit flat instead of standing up in a base, and usually won't move on their own. They often represent a new unique space type or spot you can stand on; sometimes they completely cover up the usual space that's underneath, while others should be set slightly aside so you can still see what's under.

Card stands

On the rarer side; these pieces' strange shape allows them to fit comfortably among decks of cards in the box of supplies (or for the smaller ones, among stacks of bills). Some effects will cause these to get placed on top of a certain pile, and something might happen if a player tries to draw from that pile.

Turns and rotations

These two terms refer to periods of time. Simply put, a rotation is 1 turn by each player, so if there are 3 players in the game, then 1 rotation would usually consist of 3 turns: first player 1 taking a turn, then player 2, then player 3. Some notes about these:

[Diddy Diddy Diddy] If something says you need to do something 5 turns in a row, that usually implies your ***own*** turns, not all players combined. If you lose a turn in the middle of this, it doesn't affect your streak. Similarly, if something happens "on your next 3 turns", turns you lose in the middle of this don't get used up for that effect.

[cycle with # in middle] If something happens "for the next 3 rotations", that means it starts immediately on your turn, then other players; then you, the other players; then you, then other players; then it's done. Doesn't happen an extra time.

[+die] If a player is told to take an extra turn:
- They take one right away after their current one, before the next player, and it's still within the same rotation.
- If it's not currently their point in the rotation, they wait until it is, and then they gain a turn so they take all the extra ones consecutively.
- If they're already scheduled to get an extra turn this rotation, it stacks so they'd gain ***another*** immediately after that.

[+die X +die] For effects which let you gain an extra turn, you could trigger one multiple times per rotation, but you can't have 2 of them triggered by the same event at once; for example, Kiddy's Water Bounce ability and The Gangplank Galleon item both triggering from Water. In this case, you'd just pick 1 of them to activate.

[-die] If a player is told to lose a turn:
- They lose their turn next rotation.
- If they're already scheduled to lose a turn next rotation, it stacks so they'd lose ***another*** the rotation after that.
- However, if they were already scheduled to ***gain*** a turn this rotation, they lose that turn instead.

[Diddy ? mark] If an effect will trigger on your next turn, if your turn is skipped, the effect will just wait until the next turn you actually take. Each time the rotation reaches you, it's not necessarily "your turn" then, it's just the moment when you determine whether it ***will*** be your turn. If an effect allows you to choose to lose a turn / skip your turn, you can't make that decision until that moment arrives.

[coconut] Most items, ability effects, song effects, etc. can only be used during your own turn, unless specified otherwise.

[calendar] It's important to keep count of the current rotation number in the game (for rare effects like the Birthday Calendar item), but if you are running the DKC Board Game digital program, you don't need to mark this by hand, since it's done automatically whenever you click the button to advance to the next rotation.

Counters

Dice aren't just used for rolling a random number, but can have a very important additional function: marking the current value of a counter that's counting up or down. Many character abilities, items, bonuses, etc. will say that something happens after N turns, or that an effect can apply N times - using a die counter is a good way to mark this. You'll usually see the [Counter] symbol to indicate this. Some notes to keep in mind:

[colors] You can use any color dice for counters, doesn't have to be just your own character's. However, when a card has many counters on it to mark progress for several players at once (such as the "Which game you reppin'?" bonus), it's helpful to have the die's color correspond to that color player.

[0] When rolling a 10-side die, "0" actually means 10. For counters, you can use a "0" to refer to either 0 or 10, as long as you're consistent.

[2 dice] You can use 2 dice to represent a 2-digit die counter, like in this image. If some effect modifies a die counter that's being marked like this, you can't change the upper digit at will, only the combined counter's overall value.

[8 on 8-side -> 9 on 10-side] If a counter gets modified by some effect, just because that die can't show a number high enough doesn't mean the number can't actually go any higher. Instead, just swap it out with another die that goes up to higher numbers.

[writing number] You don't ***have to*** use dice for counters, but it's usually more convenient than repeatedly writing and erasing a number. (However, tallies are used to mark banana birds returned to the Queen and damage dealt to the final boss, not counters.) For anything that mentions die counters, such as Diddy's Guitar Gazump ability, you can't avoid getting your counter affected by it just because you decide not to use a die; instead, that effect applies to any counter created by a [Counter] symbol, regardless of what's actually being used to mark it.

[up/down] A player can use die counters to count ***up*** instead of down if they want, as long as they're consistent with that die and don't suddenly flip-flop how they refer to it.

[token with X] Golden feathers and banana birds can change die rolls [Rulebook: ##], but not the value of die counters.

[Game Boy Advance] 1-time use items [Rulebook: ##] should not be marked with a die counter; its number of uses can't be changed up above 1 or down to 0. However, N-time use items should be marked with die counters, and their uses could be modified above the usual max or down to 0. (This also applies for things besides items, like number of times you need to do something for a homework assignment.) When an N-time use item's counter reaches 1, you still keep it there; you don't suddenly treat it as a 1-time use item.

[calendar] It's important to keep count of the current rotation number in the game (for rare effects like the Birthday Calendar item), but if you are running the DKC Board Game digital program, you don't need to use dice to keep track of this, since it's done automatically whenever you click the button to advance to the next rotation.

Choose Your Character

Donkey, Diddy, Dixie, and Kiddy have explored Donkey Kong Country in the past, but now their extended family has come to tag along, plus more friends and acquaintances who want a piece of the action in this competition. Which Kong or other character should you pick to play as? Each one has certain pros and cons that affect their gameplay. They've also got positive and negative abilities which will come into play (read each character's blurb for a quick overview on what they can do, or page ## for a deeper rundown on how abilities work in general). So, you can strategize and pick a character that best suits your playstyle - or just whichever one you're a fan of.

Note: You can even pick a random character if you want, by shuffling the character cards and drawing one; just make sure Odd Rock and the K. Rool costumes aren't in the deck, since those can't be chosen at the start of the game.

Cranky: Half of these chuckleheads I've never heard of before, and the other half I *wish* I'd never heard of.

Donkey Kong

"Banana SLAMMA!!"
Video game debut: Donkey Kong Jr. (1982-08-02)
DKC Board Game debut: Version 1.0 (2013-07)
He's bigger, faster, and stronger too. This thrilla gorilla can slam bosses, accumulate prizes, and chuck his opponents into the dirt.
A good choice for beginners, or leaders of the bunch. Most of his abilities are on the simple side, but they still pack a punch; for example, his Ground Slap lets you pick up extra goodies whenever you're in DKC worlds. Not many wacky gimmicks here. Donkey doesn't have to focus on things like hunting players down or overcoming any big game-halting bottlenecks - he'll leave that stuff to the weird newcomers.

Diddy Kong

"You're bluffing, lizard face... I'm outta here!"
Video game debut: Donkey Kong Country (1994-11-18)
DKC Board Game debut: Version 1.0 (2013-07)
This chimp lives fast, zooming around the board while using banana peels and feathers to keep up his advantage.
Diddy has always been a powerful character in this board game (not to mention his competitive video game appearances). But, that power sometimes comes at a price - you can think of him as the "glass cannon" type here. He's able to quickly get where he wants and do what he wants (check out his Super Golden Feathers and Hat Trick abilities). But on the flip side, he usually has to take extra steps to protect himself, since dangerous things like losing lives or failing boss "!" rolls will hurt him more than others.

Dixie Kong

"You're not scared, are you?"
Video game debut: Donkey Kong Country 2: Diddy's Kong Quest (1995-11-21)
DKC Board Game debut: Version 1.0 (2013-07)
A balanced, responsible Kong. She can get things done, able to clear bonuses and find banana birds with impressive skill.
Dixie is able to deal with extra objectives (such as homework, music, "!"s, and Queen Banana Bird) super-effectively. Her 8-side "!" die from Ponytail Twirl alone is a very satisfying advantage to have. With those things taken care of, your own raw skill in collecting materials and building levels effectively will be what puts you ahead of the competition.

Kiddy Kong

"AAAAAAAAAHHHHH"
Video game debut: Donkey Kong Country 3: Dixie Kong's Double Trouble! (1996-11-18)
DKC Board Game debut: Version 1.0 (2013-07)
Slow and steady wins the race...? Kiddy plays effectively when staying under the radar, carefully planning to come from behind to suddenly crush the competition.
The first somewhat-gimmicky character. Baby's College Fund encourages Kiddy to spend a lot of time without reaching Start, and he'll be greatly rewarded if he utilizes Funky's Flights to keep the streak going. Your negative traits mean you'll usually be letting someone else stay in the lead for number of levels built; on the other hand, Kiddy can finish making songs more efficiently than anyone else. Maybe he'll grow up to be a world-renowned composer!

Tiny Kong

"Ready to kick reptile butt!"
Video game debut: Donkey Kong 64 (1999-11-22)
DKC Board Game debut: Version 3.0 (2020-04-08)
Whether big or small, this clever monkey can do it all. She can teleport, land on specific spaces she wants, and really get on opponents' nerves by stealing from them.

A tradeoff character similar to Diddy. In her case, she can move fast or slow at will, and can pick up stuff very quickly (extra token usage from Saxophone Slam and Can't Fit in Frame, stealing items with Mini-Monkey Mischief). The downside is a harsher penalty for Lose a Life, and potential huge cash payments you need to pay off. Find a way to scale up your production early and you'll steamroll into the lead later on.

Lanky Kong

"Yahoo! Come up here and get me, dummies!"
Video game debut: Donkey Kong 64 (1999-11-22)
DKC Board Game debut: Version 3.0 (2020-04-08)
The oddball Kong who doesn't play nice. He can fly across the board and hunt his opponents down, trap them, and even avoid getting punished by them.
Want to swap your tokens to other types at will (Clowning Around)? Force opponents to land on bad spaces (Grape Shooter)? How about completely stop them from taking level-building shortcuts (Trombone Tremor)? All these powers and more can be yours... All you need is cash, and lots of it. Your negatives aren't even that bad, as long as you don't mind shunning any goodwill you have with other players.

Chunky Kong

"H-help me! Chunky d-doesn't like heights!"
Video game debut: Donkey Kong 64 (1999-11-22)
DKC Board Game debut: Version 3.0 (2020-04-08)
And then there's Chunky - he's dead. A high-stakes gambler who can bend the rules to get what he wants, but at a dangerous price.
Chunky has a bit of a downside with his core He's Dead ability, making game overs a constant slow trickle instead of something he can entirely avoid. But he's also got a slew of simple-yet-powerful abilities that can let you swap materials, take extra turns, and save lots of money. Chunky's an especially good counter to characters like Taj and Klubba who use a bunch of pieces, since he can Sandwichium Knucklus punch them out of the way like they're nothing.

Taj

"I am the genie of the island. I am here to help you!"
Video game debut: Diddy Kong Racing (1997-11-21)
DKC Board Game debut: Version 4.2 (2021-10-04)
This mysterious mammoth has a wide array of vehicles and items to get to places faster or put the pain on opponents. Upgrade his humble starting stats using power-up tokens.
Let's address the elephant in the room. Your balloon ability item deck and Taj Power-Up Track you'll need from the start may make things more complex, but you'll be appreciating the strong advantage they eventually give you. Use your weapons to both leave traps for players (Green Balloon) and directly attack them (Red Balloon). As long as you scale quickly and prepare for late-game threats like Wizpig's Wrath, you'll be rolling out the red carpet to your victory.

Xananab

"As my way of saying thank you thank you bo bank you, have some bananas!"
Video game debut: DK: Jungle Climber (2007-08-09)
DKC Board Game debut: Version 4.2 (2021-10-04)
This audacious alien is a true jungle climber, swinging around the board and having extra choice of spaces, while using all kinds of diverse and helpful banana abilities.
Your core Peg Climbing ability gives you more choices each turn than most anyone else. Meanwhile, keep in mind the dangers of having such a fragile, potassium-rich body, and needing to visit specific places to find your Spirowarps. On the plus side, you can swap materials (X to Y to Z) and even spaces (Bananaphone) to make them more beneficial to you.

Klubba

"Stop right there, ye scummy swabs! Step on me toll bridge an' I'll throw ye overboard!"
Video game debut: Donkey Kong Country 2: Diddy's Kong Quest (1995-11-21)
DKC Board Game debut: Version 4.3 (2024-04-24)
When this renegade joins the fray, you're all just pawns in his game. He'll bend the board's pathing, dirty up the bonus pool, and borrow whatever he needs... All in a day's work.
The board will be super-cluttered when Klubba introduces all his tricks and traps onto the field. You might want to cram them into the Lost World, since you can pair this with abilities like Get Out of My Swamp! to force people into the Lost World more often, and Golden Warp Barrel to warp yourself there and pick up the spoils. It may be a tad tougher for you to shop and build levels, but the absolute chaos you'll inflict will be worth it.

VoidCo

"May I remind you, you're speaking to the president of Void Company... only the most powerful mining organization on the planet."
Video game debut: Donkey Kong Bananza (2025-07-17)
DKC Board Game debut: Version 5.0 (2026-05-28)
Greedy? Glamorous? Just here for a paycheck? Either way, time for a hostile takeover. Make secret plans, block opponents' level-building, and gain a leg up with advanced tech.
Poppy was just about to sneak into the board game all on her own, until Grumpy and Void Kong got wind of her plan, and begged her to let them join as a trio. She's not thrilled, but is willing to bring them along for their combined strength and versatility. You can split into 3 characters on the board and then turn invisible, attacking foes who are unaware they've suddenly come into range. Stealing "!"s from opponents and turning them into a boulder with the All-Mine Remote will really make them go bananas!

The Kremling Krew and the 3 swappable forms of K. Rool are all combined into 1 character set; if you play as them, you must start with the Kremling Krew and then switch to K. Rool partway through the game after you've completed certain requirements. K. Rool himself has some tough tasks when it comes to visiting Cranky and doing a giant unique final boss fight, but he makes up for it with a wide range of very strong capabilities.

Kremling Krew

"W-we've had a few technical problems, your m-majesty, and my men are all lazy."
Video game debut: Donkey Kong Country (1994-11-18)
DKC Board Game debut: Version 5.0 (2026-05-28)
To restore their leader to glory, this ragtag militia will have to grow their ranks one-by-one, gaining a wide array of unusual tricks as they complete the first half of the game.
If you've played deck-building games such as Dominion or Slay the Spire, you'll find a similar gameplay mechanic here: with each level you build, you acquire a new minion. You'll draw several minions per turn and get to choose from many wacky methods of movement, level-building shortcuts, protection against threats, and more. Be aware of the hard bottleneck at the halfway point: when you've built 70 levels and likewise finished half of your scrapbook, banana birds, and homework/music, you're barred from progressing further as the Kremlings and can finally swap into the almighty K. Rool.

King K. Rool

"I'll destroy DK Island. Awha ha haa!"
Video game debut: Donkey Kong Country (1994-11-18)
DKC Board Game debut: Version 5.0 (2026-05-28)
Step aside, mindless monkeys, and make way for the King! Using his ship and its weapons to travel fast and directly attack, he aims to exert absolute domination over his foes.
The King costume excels at going super-fast (both from your massive 24-side die and by jumping ahead several worlds), and picking up extra materials to build levels quickly. Stay close to opponents on the board and attack them with Crown and Cannonballs to assert your power.

Kaptain K. Rool

"You Kongs think you are so clever, don't you?"
Video game debut: Donkey Kong Country 2: Diddy's Kong Quest (1995-11-21)
DKC Board Game debut: Version 5.0 (2026-05-28)
Less boldly aggressive, much more sinister and sneaky. He'll bar others from getting what they need, all while hiding in the shadows and mocking their attempts at retaliation.
The Kaptain brings some of his invisibility magic into the board game to essentially avoid ***all*** harm - your abilities let you ignore bonuses you don't like and adjust your movement rolls at will. Disable certain spaces for opponents with All Tied Up, and chuck a Spikeball on the board to discourage them from taking certain paths. Your plan to capture DK may have been foiled, but you'll get your revenge so swiftly now that it'll seem unfair!

Baron K. Roolenstein

"I'm the master chef around here, and I reckon it's about time your goose was cooked!"
Video game debut: Donkey Kong Country 3: Dixie Kong's Double Trouble! (1996-11-18)
DKC Board Game debut: Version 5.0 (2026-05-28)
An evil genius (and no one dares question it), the Baron can unleash a pot-pourri of strange effects onto his opponents to slow their progress while buffing his own.
Your abilities can let you get rid of unneeded materials to find useful ones, modify opponents' rolls, and give them extra penalties when building levels or landing on frequent Water spaces. Swap into Baron if you're trying to dodge opponents' offense while still harming them from afar. Your wife will be so proud when you finally bring back that golden trophy!

Character Stats

Charts will be in this format - examples: Complexity, Interaction

Speed

Your basic movement speed around the board, defined by the size of dice you roll each turn. Going faster means you can get to worlds you want faster, but with the trade-off that you won't spend as much time there.

Max Speed

Average Speed

Note: The Kremling Krew can roll many different dice to determine their speed each turn, depending on what "Move" minion card you play. What's shown in these graphs is the speed for Kritter, who you have available every turn.

Money

How much cash you'll earn each time you reach Start. However, the money you earn by holding onto tokens over time is often more significant (and usually isn't character-dependent).

Lives

Your starting amount of lives; max amount is double this number. The more lives you have, the farther away you are from a potential game over making you lose levels you've built.

Inventory

The amount of slots you have available for material cards, tokens, etc. (see page ##) - bigger is always better.

Tokens

The max number of tokens you can hold at a time. Although they're fun to spend, make sure you hold onto at least a few to gain steady cash income.

Saving

How many levels you can save each time you visit Candy's. This is another way to counter the pain of game overs - you usually can't lose any levels that are saved. (If something outside of Candy's says you can save now, and doesn't specify how many levels, assume it's your usual number.)

Range

A few abilities will mention your range value, or your range plus another player's, and allow you to do some effect if you're that many spaces or fewer away from them on the board.

_____

These 2 aren't traditional stat values that determine what a character can do, but rather a judgment of their overall capabilities that can help you decide which one might fit you best - or who's a threat you'll need to watch out for.

Complexity

The higher this is, the more things you need to think about during your turn, and the more unique mechanics you need to stay aware of. There's often a tradeoff, though, where greater responsibility can earn you greater power.

Interaction

How much your character directly affects other players, either by attacking them, laying traps, or changing things off the board like opponents' level requirements.

Cranky: Had to ban me from being a playable character, they did. Only natural, I suppose... I'd be so overpowered, I'd win every game.

Character Abilities

The character you choose isn't just a pretty face - they've each got a whole set of personalized positive and negative abilities you can customize to suit your playstyle. These provide sudden unique effects, similar to what you might find with bonuses, items, and music; but unlike those, abilities don't take up any inventory and stay attached to your character, available to be triggered at any point. Here are some properties they might have:

Positive	These have effects that benefit you or hurt your opponents. You might earn extra goodies from spaces, get to skip requirements when building levels, warp to other places on the board, attack opponents so they lose stuff, and much more.
Negative	These have effects that hurt you or benefit your opponents. You might have to do extra requirements, lose turns, or give stuff away to other players. Of course you would never equip these if you had a choice - but some of them are core to your character and can't be unequipped, and you'll usually need to equip some in order to lower yourself to within the max ability point threshold (see below).
Core	A few of your abilities are so central to your character that being able to unequip them wouldn't make sense. Some of them are neutral (0 points), providing a spin on your gameplay that's neither positive nor negative.
Unlockable	These are so good that you don't get access to them right away, and have to purchase them from Candy's shop by spending crystal coconuts. Look for the circle next to the coconut icon to find how many coconuts are required to buy it; once you do, write it in the "Abilities Purchased" section on your level sheet. (More details on page ##)
Full game	Some negative abilities are marked with this, meaning they're a long-term task you have to deal with, and being able to have it only part of the time would be unfair for balance purposes. If you take this when you first set up your ability loadout, you're in it for the long haul.
Always-enabled	Abilities might get temporarily disabled by some effect from a bonus, etc. But, abilities with the [Always-Enabled] symbol can't be disabled, because it would lead to confusing or unbalanced gameplay.
Gray	These aren't character-specific, and can be equipped by anybody if you've got the coconuts to pay. You can find random ones at Candy's shop. (Keep in mind, abilities you've got equipped do still count towards your max point total, even if they're not your own character's ability.)
Costume	These are rare and only used by one character, K. Rool. He can't swap them by usual methods (see below), but instead when he visits a K. Rool entry space.
Duo	Only used in team mode (see page ##). Your team will get exactly 1 duo ability which depends on your characters. It's always a positive effect, but doesn't count towards your point total.

Cranky: Of course, I could easily win this board game with none of these fancy-shmancy techniques. Thinking of trying that yourself, hmm? Well well, didn't think I'd ever see someone who's got real guts. [Achievement]

Ability point total

If you add up the point amounts from all the abilities you currently have equipped, that's your ability point total. You must make sure this doesn't go above a certain max value, which starts at -1 when the game begins. Check the "Ability Tiers" section on your level sheet to see the progress you've made - after you build a certain number of levels, the max point value increases, so your character can become more and more powerful later on. You might eventually find yourself able to get rid of all negative abilities - or alternatively, keep them all while equipping yourself with every positive ability possible!

How to swap

If you visit Candy's Save Point, you can swap abilities: equip and unequip whichever ones you want (as long as they're not core or full-game) - just keep in mind the ability point total (see previous point). If you're not at Candy's, you can still swap if you spend a crystal coconut on your turn. (1 coconut doesn't equal adding/removing 1 ability, but rather as many as you want.)

Strategy for swapping

When should you choose to equip one ability versus another? For some general rules of thumb: If you're doing well in one area but lacking in another (a particular game's levels, "!"s, extra lives, scrapbook, money, music notes), then see if you have an ability that would help you out in that area, or remove one that might be harming you in that area. Your character might have access to abilities that sync well together (like Klubba, who can warp players to the Lost World and then attack them with traps that he'll probably want to set up *in* that world). If you have the space to, try comboing them; if you don't have the space, it might be better to equip independent abilities that work well on their own. Check out the "How to Play" section of the digital program for tons of tips and tricks for each character and ability.

Remembering events

Each player has a ton of abilities to keep in mind, both simple and complex (not to mention items, active bonuses, etc.) - so it'll be your responsibility to keep track of everything associated with what you've got. Have an effect where you take $20 from a player every time they land on a bonus? Better get

used to personally asking them every time! Even if the effect is negative for you and good for them, they still probably won't remember if they're too focused on their own tasks during their turn. You might not want to, but you should do the right thing and let them know when something of yours triggers. If everybody forgot something until later on, you can have it apply when you realize it - or if it's too late and it would mess up the game's flow, go with whatever the group decides is reasonable. (This point applies to everything in the game in general, like bonuses, items, etc. - not just abilities.)

Cranky: Nonsense. What you should *really* do when someone forgets and then tries to sneak by and do something too late, is give out a good whoopin'... Perhaps consider some medieval torture methods.

Disabling abilities

You might see a bonus or other effect which causes your character's abilities to suddenly get disabled! Don't worry, it's not the end of the world. You still keep your stats, so you get to move, have an inventory, take money when reaching Start, etc. It's just that all the unique positive effects aren't visible or available - then again, negative ones might get disabled too. Anything that doesn't have the always-enabled [Always-Enabled] symbol is fair game to get disabled.

Note: Some abilities have specific text for what to do if they're unequipped and/or disabled, but if they don't, follow these rules:

- If an ability is *unequipped*, its effects *do* reset unless otherwise stated. (Counters on it get set back to their starting value. Pieces associated with it get removed. But, items created from it don't get discarded.)
- If an ability is *disabled*, its effects pause and *don't* reset unless otherwise stated. (Counters on it get paused, and don't tick when the conditions are met. Pieces associated with it stay in place, but are treated as not present. Items created from it don't get discarded.)
- Duo abilities in team mode can't be unequipped. If they get disabled, it counts as disabled for both teammates. If all abilities get disabled, this includes duo abilities.
- If your character's movement method relies on an ability that got disabled, use your default movement: Tiny Kong rolls 8-side, Taj rolls 10-side, Xananab rolls 6 + 4-side, Kremling Krew rolls 9-side.

Tokens

Name	*Income per turn*	*Effect when spent*
Camera Piece	$20	Copy a material card
Golden Feather	$20	Change your movement roll
Banana Bird	$20	Change your non-movement roll
Crystal Coconut	$20	Unlock or swap abilities

These little pieces, which you'll pick up from token spaces on the board, can help you accomplish useful tasks during gameplay. Maybe you'll want to spend them for their 1-time effect as soon as possible, or hold onto them for several turns so they generate income for you ($20 per token at the end of each turn). You can hold multiple copies of a token type. But, each token takes up 1 inventory slot, and each character can only hold a certain number of tokens (marked on their character card). Usually, once you've used a token's 1-time effect, you must return it to the supply.

You can pay up to 3 tokens of any types when you visit Cranky, Candy, or Wrinkly to get 1 extra life per token. (If you give banana birds, they must be unflipped, and you completely give away the bird, don't flip it. What does "flipped" mean? See the banana birds section below.)

Camera piece

You can use these almost any time during your turn. A camera piece copies an opponent's material card so you also get 1 (take it from the supply). Alternatively, you can use one on yourself to copy 1 of your own materials.

Note: Can't use a camera piece to copy a card if that card's about to disappear due to a bonus, item, etc. that got announced but not resolved yet.

Golden feather

You can use a golden feather after rolling for movement to change your base roll by -2, -1, +1, or +2, in order to help you land on a specific space you want. Can go above your normal maximum this way, but can't decrease your roll to 0 or lower. Can only use 1 feather per 1 movement roll.

Note: Can't use a feather to dodge a Lose a Life space! Some bonuses, items, etc. also make other space types temporarily undodgeable.

Banana bird

Banana birds are useful for changing dice rolls in nearly any situation besides your movement roll. After you perform the roll, you can use 1 banana bird to change its result by -2, -1, +1, or +2. (This can't go outside of that die's usual number range, unless you see the unbounded [Unbounded] symbol.) Can only use 1 bird per 1 roll.

Note: Can never use a bird (or feather) to change a roll to a negative number. Usually can't change to 0, unless otherwise specified. If you roll multiple dice at once, one banana bird changes the result of 1 of those dice, not the combination. Birds can only modify dice with just numbers on them, not letters, images, etc.

Here's a few examples of situations where you might want to modify your die roll:
"!" after you build a level
Bonus card
Character ability
Expresso racing
Funky's fishing
Item effect
Swanky endurance, quiz, or casino
Game over
Final boss fight

After you use a banana bird to change a roll, don't send the token back to the supply; instead, flip it over (so the bird is not showing). When a bird is flipped over, it still takes up space in your inventory, but you can't use its ability again, it doesn't generate any income for you, and you can't give it away for effects like trading to Cranky/Candy/Wrinkly for an extra life.

Cranky: Oh, I know a thing or two about flipped birds. I gave one to the last guy who cheated against me at the sideshow!

Throughout the game, you also need to bring 20 banana birds to Queen Banana Bird's space as a requirement before you can win. When you land on her space, you can give her any or all of the banna birds you're currently holding (flipped or not, either is fine); for each 1, mark a tally in the Banana Birds Returned section on your level sheet. (Unlike levels, these tallies can't get lost if you lose all your lives.) Once you've completed her quest by giving a total of 20 birds, you can't give any more.

Crystal coconut

These mystical treasures are connected to your character's upgradable ability system. [Rulebook: ##] If you're at Candy's, you can pay 3 coconuts at once to unlock your instrument ability, or 2 at once to buy a gray ability you've drawn from her randomized deck.

Swapping your currently-equipped abilities and music effect [Rulebook: ##] can be done for free at Candy's, but if you're anywhere else, you can spend 1 coconut to swap either or both of those things.

Cranky: Just you be careful that scheming crocodile doesn't get his scaly mitts on any coconuts… I've been guarding mine from him since before you were born!

Note:
These are the 4 standard token types, but others exist. For example, Taj's power-up tokens can only be used by him; in situations where he can receive any token type, he (and only he) could decide to get a power-up token instead of a regular token type (and likewise if he has to give up a token of his choice).

There also exist things called animal tokens, which are unrelated to this category (despite "tokens" in the name). Animal tokens are on paper bills instead of wooden circles, they don't take up inventory, and don't generate income. For more details on them, see the Bonuses section: [Rulebook: ##]

Bonuses

If the usual course of events is getting too samey for you, sooner or later you'll land on a bonus space to shake things up. These might make players gain or lose things in their inventory, move around, change level requirements, get to make tricky decisions, or even take an aside to play entire complex minigames! When you land on one, draw the top card from the corresponding pile. A few of the cards may harm you or benefit other players, but a large portion of the cards in the pile will give you (and only you) something positive. Here's the specific breakdown:

Bonus types

A = Good for you
B = Tossup for you
C = Bad for you
D = Good for you and/or other players
E = Tossup for you and/or other players
F = Bad for you and/or other players

Bonus type ratios

DKC Bonus / DKC2 Bonus / DKC3 Bonus
A = 44 / 90 = 48.9%
B = 12 / 90 = 13.3%

C = 5 / 90 = 5.6%
D = 16 / 90 = 17.8%
E = 8 / 90 = 8.9%
F = 5 / 90 = 5.6%

ANY Bonus
A = 56 / 120 = 46.7%
B = 17 / 120 = 14.2%
C = 6 / 120 = 5%
D = 24 / 120 = 20%
E = 10 / 120 = 8.3%
F = 7 / 120 = 5.8%

Note:
If you land on an "ANY Bonus" space, it doesn't mean you can choose any one of the bonus piles you want. Instead, take one from the yellow pile labelled "ANY Bonus". This means the bonus's event, story, or reference could be referencing any game in the whole DK series (or even something outside of it), rather than something from game 1, 2, or 3 from the trilogy in particular.

If a bonus card has some effect that may happen later, or will keep happening for a while, keep it on the table until it's done. If it'll only affect one player, place it in front of them; otherwise, place it somewhere on the board where all players can see it and remember it.

[1-A-36 (Donkeydevil)] If a bonus talks about a certain character, you don't actually have to be that character; it's just described that way for fun.
[3-A-22 (strapping young monkey)] Similarly, if it says Kong/monkey (like this one), you don't really have to be one.
[4-A-28 (Lanky orb)] If it describes that you "go to" a place that doesn't actually exist in the board game, you don't really go anywhere.

K. Rool's Krap spaces and cards exist if Klubba's being played; these are bonuses too, but almost always have negative effects. Stay away, unless you think their hilarity outweighs their pain! These spaces can never be removed, even by effects like Chunky's Sandwichium Knucklus. [Priority]

If you draw a bonus that lasts for some amount of time and you're no longer able to use it, discard it. For example, if you draw this bonus [2-A-42] and don't have any more Gauntlet levels to build (either right away, or eventually), and also don't have any means to add an extra Gauntlet as a requirement to a level, discard the bonus. This might be a case-by-case basis, so use group agreement to decide.

Additional rewards

In order to make bonus spaces even more enticing, each time you land on one, you also always get this additional reward (either before or after you draw a card):

Bonus type	***Additional reward***
DKC Bonus	Choose a DKC level you've built but don't have "!", and re-roll for its "!"
DKC2 Bonus	Same, for DKC2
DKC3 Bonus	Same, for DKC3
ANY Bonus	Take an animal token. If you have 3 at the end of your turn, must trade them in and can receive a card of choice

Note: When you do a "!" re-roll, if it's for a boss level and you miss again, you don't have to get the penalty (of losing a life or 2 slots of stuff) again.

Cranky: You wimps are pampered with these helpful bonuses nowadays. I remember back when there was no "!" reroll or animal token nonsense, and the ratio was more like *this*! Y'know, bonuses were a ripoff of Monopoly's chance cards - as in, there's a "chance" you might get some meager reward, but don't count on it!
DKC Bonus / DKC2 Bonus / DKC3 Bonus / ANY Bonus
A = 7 / 25 = 28%
C = 6 / 25 = 24%
D = 6 / 25 = 24%
F = 6 / 25 = 24%

Cranky's Cabin

Cranky: Welcome to the only place you actually *need* to visit. Literally! Unless you think you can get *all* those "!"s on your own - ha! When pigs fly. [Achievement] More than likely, you'll be giving me thousands of well-deserved dollars buying "!"s you missed, and racing goofy-looking birds against your opponents for my entertainment.

When you visit, can do any of these 4 things in any order:

Note: "Visiting" Cranky or any other character doesn't mean you need to move your player piece to any particular location; just stay where you are on the board.

Tips

The main important function of Cranky's space is so you can get "!" (exclamation points) for levels which you missed when you first built them. Lore-wise, this equates to buying tips on how to find all of the secrets in regular levels, or tips on how to get good at beating bosses. Each tip costs $100 times the level's "!" difficulty number, listed on the level sheet. You can buy as many as you want in 1 visit; when you do, mark the "!" in its column.

Cranky only provides tips on levels in his current world; for example, the only place to get tips for Jungle Hijinxs or the other Kongo Jungle levels is at the Cranky's Cabin space in Kongo Jungle. (However, The Flying Krock doesn't have a Cranky, so instead you can buy the tip for Screech's Sprint in K. Rool's Keep.)

Expresso racing

Begin a quick 3-lap race, with each player sponsoring a bird to try and win exciting prizes. The race all happens during 1 turn, and doesn't take place on the actual board's spaces; the racers' progress is simply marked by adding up numbers to see who has the highest total.

Different racers will have different stats and gimmicks, some better than others. The better the racer, the more money a player will have to pay to sponsor it / bet on it.

Diagram of a racer card:
ID number
Person who came up with idea for this card
Racer name
Special skill / gimmick
Type
  Passive = Your roll each lap is affected by something, but other players don't influence it.
  React = Your roll each lap is affected as a result of what some players' rolls were.
  Attack = You can choose to use an effect to change other players' rolls.
  Reward = You might gain (or lose) some extra stuff after the race is finished.
Dice used each lap
Price to sponsor

To race, follow these steps:
Draw a number of bird cards from the Cranky's Cabin deck equal to the number of players.
Starting with you and continuing to the left, each player must buy one racer for its listed price. (Each must buy a different racer. If a player can't afford one, each unbought bird will be controlled by a bot in the race. Bots can't use choose-when-to-use effects, but they can take places in the final rankings.)
Each lap, everyone rolls at once [Unbounded], and effects apply in this order: Passive, then React, then Attack, then Reward. (If there's a conflict between 2 that have the same type, start with the player whose turn it is and then go clockwise.)
After 3 laps, if there's a tie in distance between any racers, all players roll for another lap (continue laps until there's no ties), and then players receive rewards:
  1st place (highest total distance) can get a card of choice, token of choice, or $600.
  2nd place can get a rainbow note, animal token, or extra life.
At the end, discard all racers into the Cranky discard pile.

Cranky: Y'know, if you posers were racing for real love of the sport, you wouldn't need these frivolous prizes. ...What's that? No, of course, you'd still have to pay me to rent the birds.

Note: A few racers are not birds, but cards which mention "birds" (in the context of racing) imply these racers too.

Swapping tokens

Up to 3 times, you can pay $100 and give a token of any type to receive a token of any other type. (If banana birds, they must be unflipped, and you completely give away the bird, don't flip it.)

Lives

[1up] Give up to 3 tokens of any type to receive 1 ***extra life*** each. (If banana birds, they must be unflipped, and you completely give away the bird, don't flip it.) Your max lives are twice your character's starting amount.

Funky's Flights

This rad dude's got domain over both the seas and the skies. At his place, you can do some quick fishing for prizes, and he'll offer to fly you to other locations on the board - even land on specific spaces you want.

When you visit, can do either or both of these 2 things in any order:

Fishing
If you want to play, first pay $100 to the bank and roll the white 8-side die: this represents your fishing hook. Then, roll the 4 light blue dice (6, 10, 12, and 20-side) and get prizes for each one if it's equal to or lower than the hook's value:
[blue 6] = $50
[blue 10] = $200
[blue 12] = Water card
[blue 20] = token of choice

Cranky: Catching fish? Ugh. Prizes be darned, I'd sooner watch paint dry. How about instead you call me back when they're offering those exciting water-skiing rides again.

Flying
First draw 3 Funky's Flights cards, which have the names of worlds on them. If you like a space in any of those worlds, you can do one of these 2:
[warp] Pay $100 to ***warp*** to that space: go there immediately, but don't get its effect.
[land] Pay $500 to ***land on*** that space: go there and get its effect immediately.
You can also cancel the flight and stay where you are for free. Either way, after you're done, discard the cards into the Funky discard pile.

When you fly to a space, it's not like moving forward along a path until you reach it (so you don't get the effect of reaching the Start space, and other abilities, items, etc. which have passing/reaching conditions don't apply).

Note: If you fly to and land on another Funky's Flights, you can't fly from that one this turn, but you can play Funky's Fishing a 2nd time.

Cranky: I wouldn't trust this flippy hippie to *drive* me anywhere, much less fly. Only a matter of time before his rasta airline breaks its perfect safety record.

Candy's Save Point
A useful place for safeguarding your levels, changing your character's equipped ability set, and interacting with the music system.

When you visit, can do any of these 4 things in any order:

Saving
[checklist] For free, ***save*** your levels (amount depends on your character's saving stat) so they can't be lost to game overs. Choose unsaved levels you have built, and check them off in the checkmark column on your level sheet.

Cranky: Better save every last one of 'em - otherwise I can see you flopping face-first into a spike pit and losing hours of work. I'll make sure to videotape it for DKC's Funniest Home Videos.

Abilities
[ability card] For free, swap any number of your abilities in/out. All of your character's abilities are unlocked at the start of the game as options, except your instrument [music], which can be unlocked here for a 1-time purchase of 3 crystal coconuts. Can't unequip core or full-game abilities.

[gray] Can also draw 3 random gray abilities and pick 1 to buy/unlock with 2 crystal coconuts. Discard the others, and discard your gray if you ever unequip it. (If you ever draw it again, you can get it for free.) Write all the abilities you've unlocked (including instrument) in the Abilities Purchased section on your level sheet.

[+1] The number of points your equipped abilities (including gray) can sum up to depends on your number of levels built; refer to the Ability Tiers section on your level sheet. Your new abilities begin applying once you lock in your choices.

For more details on abilities, see page ##.

Music
[notes] If you're working on a song and have all its required notes, you can spend them all at once at Candy's to complete that song. If you do this, it must be the first music-related action you do here.

[hw/music] When you complete a song, go to your level sheet's Homework & Music section to write the song's name and add its points (must reach 200 before you can win). Hold onto the song, don't turn it in. From your set of completed songs, you always have one that's active, giving you a special effect. For free at Candy's, you can change which one's active.

[song cards] Can draw 3 new random songs; you can take 1 if you want (if so, if you have an unfinished one, discard it). If you draw a song you've already completed and somehow lost (rare), you can discard it and draw another (you can't complete the same song twice).

[pool cards] You can also visit the music pool when you're here.

For more details on songs and the music pool, see page ##.

Lives

[1up] Give up to 3 tokens of any type to receive 1 extra life each. (If banana birds, they must be unflipped, and you completely give away the bird, don't flip it.) Your max lives are twice your character's starting amount.

[coconut] Outside of Candy's, if you pay 1 crystal coconut at the start of your turn, you can swap abilities (doesn't include unlocking instrument or drawing gray) and swap your currently-active music effect.

Start space

[Start] If you pass over the Start space (which is also Candy), you can either save your game, receive money depending on your character's money stat, or sometimes additional ability-specific options. But if you land on the Start space, you can do all of those actions at once, in addition to the other usual effects for landing on Candy's (not an additional save).

Music

Songs

[hw/music] You need to complete 200 combined points of homework assignments and songs before you can win the game (keep track of these in the Homework & Music section on your level sheet). A normal amount might be 100 points from homework and 100 from music, although this can vary if you're able to work on one at a faster rate than the other (due to abilities, items, or your general play strategy).

[3 notes] A song is made of a string of several required notes, representing an actual melody heard in the video game's soundtrack. The more notes a song has, the more points it'll be worth - and if it requires lots of duplicate notes, that increases its points even more. A song might take only a couple of turns to complete, or several dozen turns, depending on how quickly you focus on drawing notes.

Refer to this wheel to see what notes are equivalent (in the case of sharps/flats), and what notes are 1 pitch (or 2 pitches) away from each other:
C, C#/Db, D, D#/Eb, E, F, F#/Gb, G, G#/Ab, A, A#/Bb, B, C

[rainbow] A rainbow note can be used to represent any 1 note of your choice at the moment you turn in a song.

Note: Usually, you can only have 1 face-down (currently-working-on) song card at a time. Unlike homework assignments, you shouldn't flip over a song card the moment you fulfill its requirements (meaning you have all its notes). Instead, wait until you go to Candy's to do this.

[millstone Gnawty] From your set of completed songs, you always have one that's ***active***, giving you a special effect. (To swap this, either spend a crystal coconut or go to Candy's.) The songs you decide to take might depend on how much you like their effect, how many points they're worth, or how easily you think you can acquire those particular notes.

Note: If a song gets unequipped, its effects pause and *don't* reset unless otherwise stated. (Counters on it get paused, and don't tick when the conditions are met. Pieces associated with it stay in place, but are treated as not present. Items created from it don't get discarded.) Some song effects are 1-time use; once you use it, you can't for the rest of the game (but another player could, if they acquire the song from you).

[digital] Whenever you complete a song, check out the Music tab of the digital program to hear and visualize that melody line in the actual soundtrack! It's not required, but it's a neat way to view it in context and cap off your accomplishment.

Cranky: There's only one song you need to concern yourself with - *mine*. That old ditty has stood the test of time better than any of these other irritating, overrated earworms!

Music pool

[music] There's 2 ways to visit the pool: can do it for free whenever you visit Candy, and can do it if you land on a material space when you have your instrument ability equipped (if you forgo taking 1 material). So, your progress on songs will go much quicker as you get later in the game. (However, if you pursue Candy's a lot early, you might be able to finish one before your instrument…! [Achievement])

Note: You can only visit the music pool once per turn. [Priority] "Visiting" the pool doesn't mean you need to move your player piece to any particular location; just stay where you are on the board.

[refill] At all times, there's 1 ***note pool*** card in each of the 5 open spots. Whenever one is taken, ***refill*** its spot.

Usually when you visit the pool, you get 2 pool ***actions***. For a music pool action, do one of these:
[pool card] Take a non-rainbow card:
- [regular] If you take one from a ***regular*** spot, take the upper/bigger note shown on it from the supply and discard the pool card.
- [sharp/flat] If you take one from a ***sharp/flat*** spot, choose one of the 2 lower/smaller notes shown on it, take that note from the supply, and discard the pool card.

[rainbow] Or, take a ***rainbow*** card (if you do this, must be your ***only*** action): grab a rainbow note from the supply and discard the pool card.
[clear] Or, completely ***clear*** and refill the pool.

[note supply card] Music ***notes*** go in your inventory. They don't take up regular inventory space, but the ***max*** you can usually hold is equal to your character's max inventory size.

[song card] Other players can see your music notes and finished songs, but it's recommended to keep songs you're currently working on ***hidden***.

Cranky: Sure, you're more than welcome to show everyone your secret song card - but don't come crying to me when they start stealing the notes you needed just to spite you!

Wrinkly's Kong Kollege

This space is where you can contribute to 2 of your required game tasks: your homework and scrapbook. Don't worry, learning can be fun!

When you visit, can do any of these 3 things in any order:

Homework

Turn in and/or get new homework assignments as you work towards your Kong Kollege diploma. If you submit one, must do so before drawing new ones. Don't forget to receive a prize whenever you turn homework in! (See the full prize list, and how homework assignments work in general, on page ##.)
[hw cards] At Wrinkly's you can draw 3 assignments, and take 1 if you want it. (You can do this even if you're already working on one, in case it's too hard and you want to give up and try another.) If you draw an assignment you've already completed (can't take one you've already done earlier), or if you see the [Expirable] symbol and it's not possible for you to complete that one anymore, you can discard it and draw another.

Scrapbook

[scrapbook] Contribute cards to your scrapbook. Throughout the game, you're required to check off 1 of every material type in the game to your personal scrapbook. To do this, pay 1 of that material to Wrinkly (no additional cost; send back to the supply). Check it off in the scrapbook [camera] column of the Animals, Environments, and Resource sections of your level sheet; you can only scrapbook each material once. Unlike levels, neither scrapbooked cards nor completed homework assignments are ever lost upon a game over.

Cranky: Scrapbook, hmm? You're telling me that taking a bunch of crummy photos will help you remember this deranged journey more fondly? Bupkis, I say.

Lives

[1up] Give up to 3 tokens of any type to receive 1 extra life each. (If banana birds, they must be unflipped, and you completely give away the bird, don't flip it.) Your max lives are twice your character's starting amount.

Homework

Assignments

[hw/music] You need to complete 200 combined points of homework assignments and songs before you can win the game (keep track of these in the Homework & Music section on your level sheet). A normal amount might be 100 points from homework and 100 from music, although this can vary if you're able to work on one at a faster rate than the other (due to abilities, items, or your general play strategy). A homework assignment might take only a couple of turns to complete, or several dozen turns, depending on how quickly you focus on completing its tasks.

Cranky: I've lived with this shriveled old coot long enough to know she won't let you off easy on finishing those back-breaking tasks. Better to just suck it up and get busy... Even *I'll* admit, those banana cookies she makes are worth the trouble.

Keep these notes in mind when working on homework:
[hw card] Usually, you can only have 1 homework assignment card at a time. You can flip it over when you've finished the requirements, but you can only turn it in / get points for it when you return it at Wrinkly's. You can never turn in an assignment on the same turn you pick it up.

To complete a homework assignment, nothing you did in the past counts unless it specifically mentions it. It only counts what you do in the future after picking up the card.

[enemy drum] Unlike abilities, items, etc., homework assignments never enable you to do something you couldn't normally do. For example, "Suffering Solidarity" shown above doesn't allow you to lose a life whenever / wherever you want; instead, you have to do so by normal methods.

[dice] Some tasks are based on random chance and aren't things you have much control over. Be careful with these - for example, if one requires you to get lots of bonus items, choosing to go to lots of bonus spaces won't guarantee you'll achieve this goal, but will make it more likely.

[Expirable] Be wary of homework assignments with this symbol, meaning "expirable". That means later in the game, you might not be able to complete that one anymore; for example, it might require you to build certain levels, but if you've already built all levels then you don't want to pick up or hold onto that assignment.

You can't turn in the same homework assignment more than once, but you can do one someone else has already done.

Prizes

When you turn in an assignment, you get a prize - good job! Look in one of these columns depending on how many points it was worth, and roll a 4-side die:

0 to 9 points:	***10 to 19 points:***	***20+ points:***
1 = $200 2 = extra life 3 = random sticker 4 = 2 points of extra credit	1 = random sticker 2 = sticker of choice 3 = 2 random materials 4 = 4 points of extra credit	1 = 2 stickers of choice 2 = 3 random stickers 3 = 8 points of extra credit 4 = Teacher's Pet bonus item

To get a random sticker, roll the sticker die and take 1 from the category of that color (red = environment, green = resource, blue = animal). They're located in the Utility Items pile.

Note: If you're told to receive extra credit on an assignment, mark its points value as increased when you write it down (in the Homework & Music section on your level sheet). On the other hand, if a bonus, etc. tells you to simply receive (or lose) points, you can mark these in a separate row not attached to any assignment.

Swanky's Bonus Bonanza

Wanna let loose for a bit and test your luck? Or maybe you think you can beat the odds using big-brain analysis and some help from banana birds. You might just walk away with rewards that massively swing your trajectory in the board game!

Cranky: I don't recommend putting your so-called "skills" on display - you'd just embarrass yourself trying to compete with my high scores.

When you visit, can play up to 2 of these 3 games. If you lose the first game, the others are half-price for this visit.

Endurance

A push-your-luck sideshow game where you can get bigger prizes the farther you go… or lose everything and benefit the next winner! If you want to play, first pay $500 to the bank, then follow these steps:

[die, loop] Roll an 8-side die repeatedly; you can choose to stop and "cash out" anytime.
[ouch] If you roll a 1, you must stop and win nothing. The prize at the last tier you reached (how many times you rolled a non-1) is added to the Jackpot list.
[$1000] If you choose to stop and cash out, then you get 1 prize at your tier (how many times you rolled a non-1) or lower.

Prizes

1 = $100 2 = $200 3 = extra life 4 = random sticker	5 = $500 6 = 3 rainbow notes 7 = card of choice 8 = free item (Bazaar draw pile)	9 = token of choice 10 = $1000 11 = 10 homework points 12 = $1500	13 = Flight Voucher 14 = $2000 15 = Sideshow Host 16 = Jackpot + pick any 1 prize

Note: When prizes are added to the Jackpot, they don't get physically placed there, but instead are written down on a list. For example, if the thing added is "card of choice", the card type gets chosen by whoever eventually wins the Jackpot, not whoever lost and contributed to it.

Quiz

Do you have a photographic memory of what's been happening in the board game these last few turns? Maybe only a fuzzy, vague idea? Don't fear, step right up on the stage and have a go! It only costs $250, and you don't even have to worry about any bad die rolls.

Draw the top card of the Swanky's Bonus Bonanza deck to see what random quiz you'll take. White playing it, you're not allowed to look at the board, players' inventories, level sheets, or anything else related to the board game. So, either hold the quiz card yourself while you're turned around, or have someone else draw one and read it to you. If you're fully correct, the card will explain what you'll win; more difficult quizzes will usually get you bigger prizes.

Most quizzes will require you to name several things in a set (for example, the last 3 levels you built). As you guess each individual thing, the other players can check your answer and let you know if you're correct so far, if you want. Some effects from items, etc. may even let you skip guessing one of the things. If there aren't enough things in that set, you might get some freebies.

Cranky: Who's got the time to memorize all these worthless tidbits? It's hard enough just to remember what *lunch* was! Swanky's a sucker, though - I'll bet I could sweet-talk him into giving me an easier question.

Casino

If you pick this game, you get a choice of any or all of these 3 sub-games for some classic casino action. Each one costs $100 to play, and has an expected value that's marginally in your favor. Here, "If you lose the first game" (as mentioned near the top of the previous page) means if you play and lose all 3 casino sub-games.

Slots

Follow these steps:
Roll 3 black dice at once [black d6] [black d6] [black d6]
If all 3 match (3 of a kind), win $1000.
If you get 3 in a row (straight), win $60 times their sum.

Roulette

Follow these steps:
First pick a number from 1 to 60, then roll the black 60-side die: [black d60]
If you get the correct number, win $1000.
Otherwise, if you get correct even/odd, win $200.

Blackjack

A quick card game with a mix of luck and strategy. Use the casino playing card deck; shuffle it between each time you play. Pick another player to act as the dealer (it doesn't matter who, since they don't make any choices or win/lose anything). Then, follow these steps:
[up] [down] The dealer draws 1 face-up playing and 1 face-down.
[up] [up] You start with 2 cards. Draw more repeatedly, and can stop anytime. Keep track of the sum of your own cards' values, while the dealer keeps track of theirs.
[diamond] J, Q, and K are each worth 10. When you draw an A, it's worth either 1 or 11, your choice.
[ouch] If you pass 21 total, then that means you "bust": stop and win nothing.
[Swanky] Otherwise, when you choose to stop, the dealer reveals their cards and keeps drawing until they reach a total of 17 or more.
[diamond] When the dealer draws an A, it's worth 11 unless it would make them bust, in which case it's 1. If they reach exactly 17 by using an A equal to 1, they draw another card.
[$200] At the end, if you didn't bust and have a higher total than the dealer, then you win $10 times your total. If it's a tie, win back your starting money.
[spade] A starting hand of 2 cards equalling 21 is called a "blackjack", and wins automatically. If the dealer has a blackjack, you automatically lose. If you and the dealer ***both*** have one, it's a tie.

Note:
Splitting pairs, doubling down, surrendering, insurance, uneven payouts, and hand signals are features that are often used in real casino blackjack games, but aren't included here in order to keep things simpler.

The 2 Jokers aren't used in Blackjack, so make sure you remove them beforehand (or if you encounter one, remove it and draw another card).

Feel free to use this playing card deck for other card games when you're not playing this board game - just make sure to return it and re-shuffle when you're done!

Bazaar's General Store

Got money but wish you had stuff? Got stuff but wish you had money? Got stuff but wish you had ***other*** players' stuff? Head on over to any of your local Brothers Bear retailers for all of your commerce needs.

When you visit, can do any of these 3 things in any order:

Buy

[give coin, get magnet]
The primary attraction of Bazaar's store, you can acquire materials in bulk and all kinds of unique items to spice up your gameplay. Follow this chart depending on how many levels you currently have built:

If you're in ***1st place*** for number of levels built, or ***2nd*** (in 4-player):	[material, ?, item, ?] Draw 1 Bazaar material and 1 Bazaar item, placing them on the Bazaar mat in their left spots. Choose to draw either another material or another item, placing it in its right spot.
Otherwise:	[material, material, item, item] Draw 2 Bazaar materials and 2 Bazaar items, placing on the Bazaar mat from left to right.

[material] ***Materials:*** Can buy up to 3 copies from the supply (don't take this card).
[item] ***Items:*** Can buy it and take the card.
[gray] ***Gray cards:*** Read its text for more info.

For ***materials*** in the "special sale" spot, get an effect for it based on its category:

[animal] ***Animal:*** [Promo: Animal Buddies!] If you buy at least 2 of this card, get a free Gauntlet.
[environment] ***Environment:*** [Promo: Fire Sale!] If you buy everything else possible in the shop, get these for free.
[resource] ***Resource:*** [Promo: Surge Pricing!] The first copy of this card only costs half-price, 2nd is normal price, and 3rd costs double.

For ***items*** (not gray cards) in the "special sale" spot, get an effect for it based on its price:
[small] ***0 to 499:*** [Promo: Goodie Bag!] If you buy it, also roll a 4-side die to get: 1 = rainbow note, 2 = extra life, 3 = animal token, 4 = flipped banana bird.
[medium] ***500 to 999:*** [Promo: Carrying Case!] If you buy it, receive and place a ***Carrying Case*** utility item under it, so it takes up less inventory space.
[large] ***1000+:*** [Promo: Lifetime Warranty!] If you buy it, receive and place a ***Lifetime Warranty*** utility item under it, for financial protection in case it gets lost.

Cranky: That bumbling bear can hardly keep his store stocked with anything of real value... He's lucky I don't set up shop across the street, or he'd be run out of business in no time.

Sell

[give magnet, get coin]
A good way to gain a buck while getting rid of stuff clogging your inventory. Can sell items for half-price, and materials for full price. If you get something from Bazaar, can't sell it back to him on the same visit.

Trade

[give magnet, give material]
This is the only time and place where you can make trades with other players. You can trade any physical things in your inventories (read page ## to see what qualifies). Other players can't trade with each other on your turn, only you. In team mode, you can only trade with your partner, not opponents.

—

Note: "Bazaar" usually refers to all Brothers Bear spaces; they all have the same effects, except for certain items, etc. which refer to a specific named bear in a specific world.

Items

Just as prominent a part of your inventory as materials and tokens, items allow you to do a wide and wacky variety of things.

[magnet] Items' effects might let you steal things from opponents, move faster, take shortcuts when building levels, or even bend the game's rules in ways you wouldn't expect! Your character's abilities can achieve similar things, but items are useful in that they can be gained by most any character and integrated into any playstyle on the fly. Just be careful - great power might mean taking up great inventory space.

[dice] Some items say "***1-time use***". For these, after that item's effect eventually applies (sometimes your choice to use it, or sometimes triggered on its own), you must discard it back into the Bazaar item discard pile. Similarly, there are "***N-time use***" items, where their effect can apply a specific N number of times (use a die counter [Counter] on it to mark how many uses are left). After all are used up, must discard it.

[coin] All types of items (listed below) can be usually sold to Bazaar (but only for half its listed price), traded with other players, or lost/stolen.

Types of items

[magnet] ***Bazaar items*** (purple) or "shop items" are the most common and easiest to find: you get a chance to buy some whenever you visit Bazaar. His item deck also features gray cards with unique immediate effects, but they aren't items themselves.

[guide book] ***Bonus items*** (blue) have a similar range of wacky effects as items you'd buy from Bazaar, but they're harder to come across. If you want one, try visiting a bonus space: a few of them will give you a specific bonus item relating to the story/event on the card.

[rainbow balloon] ***Ability items*** (white) are used by a few characters: some of their abilities will make them gain a particular one of these. Generally, ability items can only be used by the character they're associated with.

Cranky: You may think you're pulling a nasty trick by stealing someone's ability item - think again, chump. You can't get any money for selling it, there's a good chance it's taking up your own precious inventory space... and you're not even stopping them from freely taking it back the next time their ability triggers!

[wrench] ***Utility items*** (pink) are a category for stickers [Rulebook: ##], golden tickets [Rulebook: ##], big E/R/A [Rulebook: ##], and other special things with many copies that you can gain under particular set conditions.

[? block] ***Special materials*** (gold) can only be found in special worlds. [Rulebook: ##] Although you gain them from material spaces and can use them to build levels in the same way as materials, in all other respects they're treated as items.

[no sign] ***Fake materials*** (green) are gained in rare negative events such as from K. Rool's Krap spaces. Even though they can sometimes be used to build levels, in all other respects they're treated as items (and pretty lame ones at that).

Note:
- If an item changes hands to another player, its effects *don't* reset unless otherwise stated. (Counters on it stay at the same value. Pieces associated with it stay in place. Additional items created from its effects don't get discarded.)
- If an item goes into the discard pile, its effects *do* reset unless otherwise stated. (Counters on it get set back to their starting value. Pieces associated with it get removed. But, additional items created from its effects don't get discarded.)

Losing Lives/Levels

You've been working hard to build levels, so be careful they don't get destroyed! It could happen if you lose all your lives. Read on and beware...

[1up] Your character starts the game with a certain number of lives (represented as Extra Life bills). The max you can hold is double your starting number. There's a few ways to gain lives; some of the most common ways are to give tokens to Cranky/Candy/Wrinkly, or get a reward from a Cranky race or Swanky endurance.

[drum] If you land on a Lose a Life space, lose a life (also referred to as "dying"). You can't dodge this space by spending a golden feather!

[DK hurt] If you get knocked down to 0 lives, you get a "game over". When you get a game over, you must lose a turn, and warp to either the Start space or the last regular space you saved on (if you've marked what it is), your choice. (This happens even if you're in a special world or a final boss arena - although if you're in arena BA-6, you instead warp to space 1 of that arena.)
Then, you must lose some amount of levels depending on what rank you're currently in (most levels built):
- 1st place: 4-side + 8-side
- 2nd place: 4-side + 6-side
- 3rd place: 4-side + 4-side
- 4th place: 6-side

Your total for this roll can be modified with a banana bird, even down to 0!
Finally, reset your lives back to your character's starting life count.

Note: If 2 players are tied for 1st, they'd both get the 1st place penalty, and the next below would get 3rd place. This logic applies in most tying situations in the game; see "All Tied Up" in the Miscellaneous Rules section (page ##).

Cranky: Game over?? It's about darn time. For days now I've been itching to leave and go do something, *any*thing else.

[checkpoint] You can't lose *saved* levels (even by choice) unless a bonus, etc. specifically mentions it. So, if you have all your levels saved, you're protected against losing levels from a game over (but you'd still have to lose a turn and warp). For more details on saving, see the Candy's Save Point section (page ##).

[eraser] If you lose ("un-build") a level, go to your level sheet and either erase it or cross it out. When you do, you also lose its "!" and star (and save checkmark, if some rare effect made you lose a saved level). However, you don't need to change the number of every level you'd built after it. Instead, whenever you re-build this level, it keeps its old number. Also make sure to mark in the digital program that you've lost the level, by clicking the number and following the instructions.

[K flag] If you're told to lose a life on an opponent's turn, you have the option to alternatively lose 1 level.

Note: Game overs will also make you lose whatever final boss fight damage you haven't saved (see page ##). But besides that and levels, game overs can't make you lose anything else - so your inventory, homework/music, scrapbook, banana birds returned, and any other goals you're keeping track of (like Tiny Kong's Student Debts) are all safe.

Special Worlds

If being stuck on the usual main board has got *you* bored, head to Bazaar's for a chance to encounter a rare golden ticket, allowing you to travel to a unique location featuring powerful materials and events not available anywhere else! Here's the steps for what to do:

Cranky: If anyone deserves a vacation, it's yours truly! Hosting races and selling tips to brainless baboons is more work than an old Kong should have to put up with.

[ticket] First, head to Bazaar. Hidden among his pile of items are several golden ticket gray cards; if you pay for one, you can take a golden ticket utility item. The price is more expensive if you're closer to first place among all players in total number of levels built.

[Funky] Once you've got a ticket, spend it at Funky's to go to a special world. You're allowed to fish that same turn, and can even look at regular world cards to see if you want to do a regular fly action instead of spending your golden ticket just yet.

[world] If you do spend your golden ticket, draw a random special world (from the Funky's Flights special worlds deck) and land on its first space (labelled with the number 1, nearby the START icon).

[plane] Put the Funky plane piece on the space you departed from on the regular board. When you leave the special world, you'll return to this space.

[diamond] Material spaces in the special world will contain some materials with a yellow outline; take these from the special materials deck. All of these are usable in place of regular materials (plus a special effect) when you build levels. However, they're treated as items in most respects, not materials (so for example, they can't be copied with camera pieces).

[Forward Absolute] When moving in the special world, you can use a 4-side die instead of your own character's movement dice. You can't go backwards or 0 spaces [Priority], but you're allowed to use items, abilities, etc. that can alter your movement, as long as you're still moving forward. Some special worlds will explain unique rules for how you should move through them.

[Toadette] Kong family member spaces are replaced with other unique characters and events. Each one of these is a "remix" space based on one of the existing regular space types on the main board. Use the space's color to tell what it's based on, and refer to the side panel on the special world for instructions on what you can do there.
Red = Cranky remix
Orange = Funky remix
Pink = Candy remix
Blue = Wrinkly remix
Teal = Swanky remix
Purple = Bazaar remix
Yellow = Bonus remix
Gray = Queen Banana Bird remix

Note:
Keep in mind, remix spaces always allow you to take actions you can do on the regular version of that space too. For example, Jellyfish Jam (a remix of Candy's Save Point) in Bikini Bottom says "Can copy up to 10 non-rainbow notes from other player(s)", but it's implied that you can do all the usual Candy stuff there too. The only exceptions are:

- At Cranky remixes, all the actions work as normal except buying "!" - you can't use your "current world" since you're not on the main board, but the remix instructions will specify what "!"s you can get.
- At Bonus remixes, the type of bonus card you draw is specified in the remix instructions, and isn't always treated as an ANY Bonus (despite the space being yellow). The additional effect you get ("!" reroll, or animal token) usually depends on what kind of bonus card you end up taking.
- Unlike on the main board, Queen Banana Bird remix spaces don't allow you to stop and land automatically when reaching the space.

[EXIT] Finally, when you reach the special world's exit, warp back to the Funky plane on the main board, remove the Funky plane, and end your turn.

Cranky: Did I hear there's even *more* of these crazy special worlds on the way in the future? One of them better take you on a trip to see my famous glory days, or they shouldn't even bother designing them.

If some effect says you can land on any space, any space of a certain type, etc., it implies on the main board, not special worlds or boss arenas. If you're in one of those, you can go to the main board if you want (unless you're blocked by some other condition).

Note:
Multiple players can be in a special world at once! Here's some rules for the rare occasion when this happens:

[plane] If someone's already in a special world and you use a golden ticket to fly to one with Funky, you go to that same special world instead of a random one. In this case, move the Funky plane to your space first.

[arrow in] If you're in a special world, you can teleport other people in via abilities, bonuses, etc. You can't be *forced* to leave (unless you reach the exit), but if some event says you go somewhere on the main board, you can *choose* to leave. If you're outside a special world while it exists, it's still a locked space for you unless you go there via your own golden ticket or someone inside warps you in.

[Xananab Jr.] You can place special pieces (from your abilities, items, etc.) inside a special world if you're there. But, as soon as no player is in a special world, all things inside it go back to the players' inventories.

Final Bosses

Even after you've built every level, found every secret, and finished all your homework, music, and banana birds, you've still got someone standing in your way blocking you from fame and glory on the 306% Complete space. It's the king of krocs (sometimes kaptain or baron), the grand poobah himself, K. Rool! Parallelling the 5 K. Rool fights in the DKC trilogy, there are 5 different K. Rool fights you'll have to win against:

Fight	*Entry space*	*Requirements before you can enter*
Gang-Plank Galleon	King K. Rool (from Vine Valley)	Build all DKC levels
K. Rool Duel	Kaptain K. Rool (from Krem Quay)	Build all DKC2 levels besides Lost World

Krocodile Kore	Kaptain K. Rool (from Krem Quay)	Get "!" in all DKC2 levels
Kastle KAOS	Baron K. Roolenstein (from Pacifica)	Build all DKC3 levels besides Krematoa
Knautilus	Baron K. Roolenstein (from Pacifica)	Get "!" in all DKC3 levels

[entry space] Once you've fulfilled the requirements to go to a boss entry space, it becomes unlocked for you. (If you win the boss fight there, it's still unlocked, but you can't do that fight again, so if you land there nothing happens.) Some bonuses, etc. let you get some effect if you go to an entry space even before having unlocked it, but they don't let you initialize the fight unless they say so. If not, you must leave on your next turn.

[arena] When you enter the K. Rool entry space for the fight you want to go to, pull that arena out from the supply and follow its instructions. You get to take an action for the first turn of the fight right away, and don't have to wait until your next turn.

[black heart] K. Rool starts with some amount of HP, and you can deal damage to him in various ways depending on what space you land on. Once you knock his health down to 0, you win the fight and warp back to the entry space on the main board.

[attack] K. Rool will do a random attack each turn; these are explained on the final boss arena's mat. You can use a banana bird to change the die roll for this attack. He also exists as a special piece that moves around as a part of some attacks (although you can damage him from anywhere in the arena).

Here are the space types used in K. Rool fights. Many of them correspond to regular spaces on the main board, but have some modifications in what you're allowed to do there:

K. Rool space	The most common space in the arena, and a quick one: roll a 6-side die [Unbounded] and deal that much damage to K. Rool.
Token of choice	Get a camera piece, golden feather, banana bird, or crystal coconut (your choice, doesn't have to be the one depicted in the silhouette on the space).
Cranky's Cabin	Can get lives and swap tokens as normal. Can draw 1 racer card (for free) and roll for its distance for 1 lap: K. Rool takes damage equal to that distance.
Funky's Flights	Can pay $400 to choose any space in this arena and land there immediately. Can pay $100 to draw 3 worlds, pick 1 of them, and do damage depending on its color: blue = 1, green = 2, yellow = 3, orange = 4, red = 5, purple = 6, indigo = 7.
Candy's Save Point	Can get lives, save levels, and do ability and music-related things as normal. Can save the boss's current HP value for you, so if you lose the fight and restart it, he'll start at that HP value. Can drop a song from your set of finished ones: do damage to K. Rool equal to that song's points value (you lose its effect, but keep its points).
Wrinkly's Kong Kollege	Can get lives and do homework-related things as normal. If you turn in a homework assignment here, do damage to K. Rool equal to that assignment's points value (still mark it as complete and get a reward). Can scrapbook materials: do 1 damage to K. Rool for each card you scrapbook (mark them as complete for you).
Swanky's Bonus Bonanza	If you play Endurance, it's free, but there's no usual prize; if you cash out, deal damage to K. Rool equal to the number of times you didn't roll 1 (don't have to stop at 16, can keep going). Can play a quiz or casino as normal.
Bazaar's General Store	Can buy and sell things as normal, but not trade. Separately from what you buy, can spend up to $1000: do 1 damage to K. Rool for each $100 spent this way.
Big E/R/A	Take a Big E, R, or A utility item depending on the space. These can be useful either inside final boss fights (if you spend all 3, can instantly win a fight) or outside (can give you materials of choice).

Cranky: This is all much too complicated for me. Can't you just roll a die a few times and get it over with? Or perhaps throw some of those useless banana birds at him.

[boss key] Once you beat K. Rool, check off that fight's boss key in the Final Boss Fights section of your level sheet. You need to check off all 5 of these before you can win the game (among your other requirements).

[credits] For Gang-Plank Galleon, K. Rool Duel, and Kastle KAOS, the first player to beat this fight must "watch the credits", meaning lose 3 turns.

[hurt Diddy] If you get a game over during a K. Rool fight, the usual consequences for game over apply. [Rulebook: ##] You lose a turn, and must choose to warp to either the Start space (no Start space effects) or the last Candy space on the main board where you saved.

[reverse, X] An effect that makes you move backward [Backward Absolute], such as the Baffle the bear bonus, should only affect you on the main board, not in final boss arenas (or special worlds).

If some effect says you can land on any space, any space of a certain type, etc., it implies on the main board, not boss arenas or special worlds. If you're in one of those, you can go to the main board if you want.

If you've unlocked 2 final boss fights on the same space, after you leave the first fight, you can't immediately start the 2nd; instead, you have to leave the space on the main board, continue forward along the path, and return to the entry space later.

You can leave a final boss fight before you've beaten it. Can do so at the start of your turn: warp back to its entry space on the main board and roll for movement. The only progress in the fight that's saved is whatever HP value the boss was at if you saved at Candy's inside the arena. When you leave, if there's no other players in that arena, then K. Rool and all other special pieces that were inside it disappear.

Note: Multiple players can be in a final boss arena at once! Here's some rules for the occasion when this happens:

K. Rool's HP value is different for each player, but his location and attacks are shared between all players. He only rolls to attack once per rotation, in the same position in the rotation as when the fight was initialized, and all players in the arena are affected by it

.

[arrow in, X] The only way to go into a final boss arena is to go to its entry space when you fulfill the conditions (or in team mode, if you're inside, can warp your teammate in if you have the means to do so). You can never be forced out of one by an ability, bonus, etc.

[Xananab Jr.] You can place special pieces (from your abilities, items, etc.) inside a boss arena if you're there. But, as soon as no player is in a boss arena, all things inside it go back to the players' inventories.

Note: The playable character K. Rool is not connected to other players' final boss fights, and instead of fighting K. Rool himself, he has his own massive challenge to complete - see his ability "Video Game Villain" for more details. However, in team mode, he and his teammate have to work together to beat all 5 K. Rool fights *and* his unique challenge! Good luck with that. When that happens, K. Rool can indeed enter a regular arena and fight himself - take note of the difference between the dark green (playable) and white (non-playable) K. Rool pieces.

Checklist to Win

Refer to this list for one last wrap-up of all the things you need in order to win the game (can complete them in mostly any order):
1. Build all 142 levels, and get all their "!"s
2. Beat all 5 final boss fights
3. Scrapbook all 68 materials at Wrinkly's
4. Complete at least 200 combined points of homework/music
5. Return 20 banana birds to the Queen
6. Some characters have the above requirements adjusted/expanded, such as Dixie Kong's Overachiever
7. Some characters have ability-specific goals, such as Tiny Kong's Student Debts

Finally, if you've completed everything else, the Finish space ("306% Complete") becomes unlocked for you. If you land on it, *you win the game*! (Similarly to the Queen Banana Bird or K. Rool entry spaces, you don't need to roll its exact amount to land on it, and land there immediately if you reach it during movement. Teleporting to land on it is also valid if you have the means to.)

After someone wins, the other players can decide if they want to stop, or keep playing to see who finishes 2nd or 3rd. If they continue, the winner is removed from the game; they take all their associated pieces off the board, and return everything in their inventory to the supply. If you need to pay something to a player (like if they have a star for building a level first) and they're not in the game anymore, pay to the bank instead.

APPENDIX

Cranky: It's *still* not over?? Waste of pages if you ask me! Maybe if you look hard enough, you'll find a reason why I was invited here in the first place. I sure as heck haven't found any yet.

Keywords

These are some commonly used terms you'll often see on cards or other places:

Keyword	***Explanation***
warp to	Go to a space but don't get its effect.
land on	Go to a space and get its effect.
naturally	You naturally land on a space if you got there via your movement roll, and that roll's amount was not affected by any tokens, items, or other effects. Going in reverse is fine.
regular space	A space that's on the main board and in a DKC, DKC2, or DKC3 world. The Start space, Finish space, Queen Banana Bird, final boss entry spaces, final boss arenas, special worlds, and other places don't count as regular spaces.
unlocked space	A space is unlocked for a player if that player is allowed to go there, meaning they currently fulfill the necessary conditions for being able to go there. For example, the King K. Rool space is locked for you until you've built all DKC levels. If you're blocked

	off from taking a path split due to something like the B. Locker item, the spaces after it are technically unlocked, since you could still fly there directly with Funky.
reach	A piece counts as "reaching" a space (or another piece) if it starts before that space and ends either on it or after it.
pass	A piece counts as "passing" a space (or another piece) if it starts before that space and ends after it (this can happen over multiple turns). However, the phrase "passing/landing conditions" is often used to refer to any conditions triggered by reaching.
in range	Something is within range of you if it's a certain number of spaces away from you (equal to your character's range value) or closer. When counting number of spaces away, can go either forward or backward, and can snake around paths (see next entry) unless otherwise specified.
snaking	When moving or measuring along a path, snaking means you go forward [Forward Absolute] for some of it and backward [Backward Absolute] for some of it, reversing course onto a different branch at a path split or join.
path split	A place on the board where one space has multiple choices for what path to go down next (marked by arrows going to them). Special spaces like K. Rool entry or Queen Banana Bird do act similar to this, but these aren't referred to as path splits.
path join	A place on the board where one space has multiple paths feeding into it (maked by arrows coming from them). Special spaces like K. Rool entry or Queen Banana Bird do act similar to this, but these aren't referred to as path joins.
immune	If someone is immune, they can't be affected by strictly negative effects. For example, losing a level is strictly negative, but having to pay money and cards when you build a level is not.
isolated	If someone is isolated, then to other players, the isolated player is treated as not in the board game at all, and can't be affected by anything.
free	If an effect says you get something for "free", that implies you'd normally have to pay something in order to get it, but don't need to in this case.
skip	● If an effect says it can trigger if you "skip" doing a particular action, this means at a time you'd normally do that action, you can choose to not do it and instead get that other effect. ● If you're taking a turn but it gets "skipped", that means it immediately ends (don't get any usual end-of-turn effects). ● If an effect lets you "skip" a normally-required thing, it means you don't need that thing. ● If an effect lets you "skip" spaces during movement, it means your movement jumps from the space behind it to the space ahead of it. Your total movement amount is not affected. That space is treated as non-existent for you except for passing/reaching effects.
of choice	There is a set of various things, and you can pick something out of that set. Its meaning might change depending on the situation: ● If you get a card of choice (if no place is specified, assume from the supply), it can be any type. ● If you get to take a card of choice from another player, it has to be a card they have in their inventory, not any arbitrary type; but, you get to pick which one. ● If instead it says an opponent chooses a card to give you, then it's their choice which card, not you.

Symbols

Sometimes you'll see these symbols inserted among text on cards or other places. These are a quick shorthand indicating a general rule, in order to save space and avoid lots of repeated text. See below for details on them:

Symbol	***Name***	***Explanation***
[Forward Absolute]	***Forward absolute***	You (or something) will follow a path in the normal direction around the board, following arrows.
[Backward Absolute]	***Backward absolute***	You (or something) will follow a path in the opposite of normal direction around the board, against arrows.
[Forward Relative]	***Forward relative***	You (or something) will follow a path in the same direction that you were traveling in. If this symbol is after a specific player, it means relative to their current direction.
[Backward Relative]	***Backward relative***	You (or something) will follow a path in the opposite direction to what you were traveling in. If this symbol is after a specific player, it means relative to their current direction.
[Random]	***Random selection***	Randomly choose within certain specified bounds. If this symbol is present, don't use a die roll (thus, it can't be modified with a banana bird), but you can use a random number generator, shuffle cards, or use any other fair means. Coin flips and random stickers follow

		this same rule, although they have the symbol omitted for brevity. For more details, see the Random Selection section. [Rulebook: ##]
[Counter]	***Counter***	This effect applies for a limited number of times, and the number should be marked with a counter (dice are often used to mark this, but not required). If this symbol is not present, don't mark with a counter (such as 1-time use items).
[Unbounded]	***Unbounded banana bird***	Most of the time when you use a banana bird [Rulebook: ##] to modify a die roll, the result is limited to a predetermined range (such as 1 to 10), and you can't modify it to go outside that range. But if this symbol is present, the range is treated as 1 up to any positive number. (Can't go down to 0 unless specified otherwise.)
[Respawn]	***Respawn/replace piece***	If a piece is removed (for example, got punched by Chunky Kong's Sandwichium Knucklus ability), this symbol means you should replace it at the start of your next turn in the same place it was just at. If this symbol is not present and there aren't any other specified return conditions, then it doesn't respawn.
[Shortcut]	***Level-building shortcut***	An effect which allows you to make the requirements of a level easier before or while you build it, not after. Examples: lower "!" difficulty, lower cash price, substituting in special materials, building entirely for free, etc. This does not include things such as camera pieces, stickers, or cards of choice (since those change what's in your inventory, not what the level requires), nor banana birds (since those increase your "!" roll, they don't lower the requirement).
[Bonus Coins]	***Bonus coins still required***	Some effect might allow you to build a free level, meaning skip the usual required cash and cards - but if you see this symbol, bonus coins are still required for you.
[Always Enabled]	***Always-enabled ability***	An ability with this symbol can never be removed or disabled once equipped, since doing so would affect the game mechanics in an adverse or exploitable way.
[Expirable]	***Expirable homework***	If a Wrinkly homework assignment has this symbol, it may be possible to get to a completion point in the game such that it's impossible for you to finish this assignment. If, when you draw this at Wrinkly's, you're already blocked from being able to complete it, you can discard it and draw another. [Rulebook: ##]
[Priority]	***Priority***	When 2 effects would directly conflict and one has this symbol, it takes priority. If neither or both have this symbol, then if one is in this rulebook, it takes priority. Otherwise, if one is temporary and one is permanent, go with the temporary one. Otherwise, go with the later one when sorted alphanumerically.
[Rulebook]	***Rulebook***	You might want to reference the rulebook to get more information or clarification on how this effect works. If a number is indicated, go to that page of the rulebook.
[Achievement]	***Achievement***	There is a special achievement associated with this card or action. [Rulebook: ##]

Cranky: So now those writers are resorting to inserting cheap colorful doodads into the text. What's the matter with how it was before, having normal sentences in plain English? ...That is, if they actually knew how to write well.

Note: If you see a special symbol, it usually refers to the text immediately before it, not after. It usually doesn't represent text itself, so when you're reading it aloud, you'd skip over it rather than treating it as a substituted word.

Team Mode

Alternatively to the standard free-for-all, you can choose to play the board game as 2 teams of 2 players. Both players on a team ("teammates" or "partners") share 1 level sheet and work together to contribute levels to it, so the game should likely be finished twice as fast.

[level sheet] When you build a level, it becomes built for your teammate too. You don't need to mark who built what first with stars, since cash you pay for levels always goes to the bank.

[level flag] If some text says "levels you've built" (in the past), it means your team in general, so it includes levels your partner built. If some text says "build some levels" (in the future), it only includes ones you build yourself.

[Diddy, Dixie] Text that says "opponents" doesn't include your teammate; text that says "other players" does include them.

[duo card] Each team gets a special duo ability card at the start, depending on the combo of characters. Duo abilities don't have any ability points, and are always core. However, each player also gets their own solo ability loadout as usual. (More ability details on page ##)

[bonus coin] Each player has their own inventory as usual, of their character's regular size. You can't freely trade with your teammate, but can throw things to your partner on your turn if the 2 of you are within range of each other (for this, add your 2 range values together). Can only throw materials. At Bazaar, the 2 of you can trade whatever else you want (including bonus coins), but can't trade with the other team.

[hw] Your 200 points of homework/music and your scrapbook are shared between your team. Your teammate doesn't contribute to the completion criteria of assignments or songs you're currently working on, and you only draw and turn in your own assignments, not your teammate's.

[banana bird] Queen Banana Bird requires 20 banana birds per team, not per player.

[DK barrel] An additional option you can choose from when reaching Start is to take a DK Barrel utility item - this can bring your teammate to your space, useful for getting them away from danger, or keeping them in range to throw things to them.

[coin] In case of resolving a dispute where both teammates have a mutually exclusive want, flip a coin to decide.

Random Selection

Bonuses, items, abilities, etc. will often have you select randomly out of a set of things, but there might not be a way to cleanly decide with a die roll. In fact, if the [Random] random symbol is present, you're not allowed to use a die roll (or if you do, you must ensure the odds are uniformly fair, and you can't adjust the result with a banana bird). Here are some convenient ways to randomly pick these things:

Randomly chosen thing
Instructions

Random space
Each space is labelled with a tiny number, from 1 to 412 on the main board. Use a random number generator program to pick a number from 1 through 412 (inclusive, in all these cases) and find that space (look in the appendix on page ##).

Random regular space
Same as above, but randomly generate a number from 7 through 142 (since 1 through 6 are reserved for special non-regular spaces like the Start space). The digital program also offers a quick way to do this: go to the Spaces tab and click "Random Space", and look for the star that pops up on the board image.

Random space within a world
For example, random space in Monkey Mines:
Same as above, but randomly generate a number from that world's first space through its last space (in this case, 24 through 40).

Random space of a certain type within a world
For example, random DKC Bonus space in Monkey Mines:
Label each valid space with a number and randomly generate a number (or roll a die, if it's few enough) from 1 to the size of that set.
[27 = 1, 36 = 2, 44 = 3]

Random world
The Funky's Flights deck contains one of each world, so simply draw one of these cards (ignore card stands on the pile).

Random material
The Bazaar's General Store materials deck contains one of each material, so simply draw one of these cards (ignore card stands on the pile).

Random material within a category
The Bazaar's General Store materials deck contains one of each material, so keep drawing one of these cards (ignore card stands on the pile) until you get a card of that category.

Random material category
Roll the sticker die and pick the category of that color (red = environment, green = resource, blue = animal).

Random level
Each level is labelled with a tiny number, from 1 to 142 on page ## of the appendix. Use a random number generator program to pick a number from 1 through 142 and find that level.

Random level within a game
For example, random level in DKC2:
Same as before, but randomly generate a number from that world's first level through its last level (in this case, 41 through 87).

Random player
Whoever's rolling calls themself 1, the player to their left is 2, and so on, and either uses a random number generator or rolls a die of the needed size.

Random other player

Same as above, but exclude yourself from the count.

Random opponent
Same as above, but exclude yourself and your teammate (if in team mode) from the count.

Random card in your inventory
Shuffle all your cards and pick one without looking (since if you looked at the backs, you'd know what category it is).

Flipping a coin
Flip the coin with Chunky on the heads side and Kritter on tails. Can't use a banana bird to change this result, even though the [Random] symbol isn't shown (for brevity). If something tells you to roll a 2-side die, you can flip a coin to represent this (heads = 2, tails = 1) and ***are*** allowed to use a banana bird on it.

Miscellaneous Rules

Cranky: That's right, you have to memorize every single one of 'em. Is this even a board game at this point, or just some convoluted legal document?

Paths and movement (light blue)

- **Spaced Out**
  An "animal space" means a material space that has at least 1 animal listed on it. An "Enguarde" space means a material space with Enguarde listed on it.
- **Numbers 'n' Stuff**
  You might suddenly find that the space numbers are jumping out of order when you enter a new world - this is fine. The space numbers are only there to help make it easier to pick a random space, or remember what space you were on if you have to clean up.
- **New World Rising**
  The "first space" of a world always implies the first that someone would reach if they're moving forward [Forward Absolute], which is also the lowest-number space in that world.
- **Keep It Realistic**
  Anything that says "a world" implies it's a regular world, not a special world, boss arena, or non-world space on the main board (such as Queen Banana Bird). This includes drawing Funky cards: implies not special world Funky cards.
- **Doin' the Splits**
  Refer to this diagram for path splits, joins, and bridges:
  Path split, space before a path split (a.k.a. path split junction), spaces after a path split. Look for the arrows to see which directions you can go out of a split (when travelling forward).
  Path join, spaces before a path join, space after a path join (a.k.a. path join junction). Look for the arrows to see which directions you can go out of a join (when travelling forward).
  Path bridge, top path, bottom path. A bridge doesn't count as a path split/join, so you can't change paths from one to the other. When you're on space **1** on the bottom path, the next space is **2**. Look for the color border: all other spaces have a thin well-defined border outlining them on all sides, but a bottom path will be bordered on its edge by the thick world color border. This is also true for special worlds and boss arenas.
- **Kitty-Cornered**
  You can never travel "diagonally" between 2 spaces that meet only at a corner. This is true on the main board, special worlds, and boss arenas.
- **I Thought You Said Weast**
  Some effects mention directions on the board, such as north/south/west/east or up/down/left/right. On the main board, check the compass in the top-right corner to see which direction is which. In special worlds and boss arenas, north/up is whichever direction makes its title readable (however, those effects can't be used / don't apply in special worlds). Effects which make you move in a specific direction (like the Dance Dance Barrel item) still don't allow you to skip past blocked paths (like with B. Locker).
- **Don't Pass Me By**
  "Reaching" effects (ones that would trigger if you reach a certain space) do still happen if you teleport to that space. However, if you and an opponent swap spaces, neither of you would reach each other. Some effect might cause you to move even if it's not your turn (like the Falco racer or Squirt minion), but reach effects would only get triggered from this movement if it's your turn.
- **Skip Sandwich**
  If you skip over a space during movement (like with Hovercraft item) it does still count as reaching it. If you use a golden feather during this, it changes your roll (not purely your final space), so you'd still skip the kinds of spaces you'd usually skip.

Going backwards (purple)

- **Wrong-Way Wacko**
  Your movement can sometimes get reversed. If 2 things reverse your direction, those cancel either out and you'd go forward for that movement. If something says to choose forward or backward with different effects for each, forward is relative [Forward Relative] to you, not absolute. [Forward Absolute]
- **Two Wrongs Make a Right**
  If an effect says it applies "if you're moving in reverse [Backward Absolute]", it includes these:
  When you normally move around the board forward [Forward Absolute] but temporarily are going reverse of that [Backward Relative]
  When you normally move around the board backward [Backward Absolute] and are ***not*** temporarily going reverse of that, thus you're [Forward Relative]

But not this:
When you normally move around the board backward [Backward Absolute] and ***are*** temporarily going reverse of that [Backward Relative]

- **Ambidonkxtrous**
  If a card says you get the choice of either forward or backward, or if something happens in both directions, Relative and Absolute are not mentioned because it's irrelevant in this case.
- **Measure Up**
  If something mentions something X spaces away from you, it implies it could be either forward or backward (and snaking around path splits/joins is fine) unless otherwise specified.
- **A Matter of Perspective**
  "In front of an opponent" means in the same direction as their current movement direction. "Behind an opponent" means opposite of their current movement direction. If it's not their turn, "current" means what direction they went on their last turn.
- **No Resettin'!**
  If you pass Start while moving backward relative [Backward Relative], nothing happens, but if forward relative [Forward Relative] while backward absolute [Backward Absolute], you do get its effect.

Activities and items (teal)

- **The Visitor**
  "Visting" a space type, such as "visiting Candy's" (with synonyms like "whenever you ***go to*** Candy's" or "whenever you're ***at*** Candy's"), refers to when the effects from that kind of space apply to you, even if you didn't land on one. Inversely, if you happen to land on that space but are prevented from having its effects apply, it doesn't count as visiting. If you are allowed to do that space's actions but choose not to, it still counts as a visit. (Cranky, Funky, Candy, Wrinkly, Swanky, and Bazaar are the only spaces where you could theoretically choose not to do any of their actions if you land there; for other space types, such as materials, the effect happens automatically.)
- **Games Within Games**
  "Minigames" refer to games at Cranky's (Expresso racing), Funky's (fishing), and Swanky's (endurance, quizzes, and casino). Some things are written as "minigames" (like Klubba's Bag a Bug, and K. Rool's Kremling Krunch) but don't count as real minigames for effects like "you can't play minigames".
- **Just Going in Circles**
  If a Cranky race is going forever because birds' effects guarantee them to tie every lap, the tying player who chose their bird first wins.
- **Globetrotting Guesser**
  These Swanky quizzes depend on your location on the board: Wacky Worlds, Swaggin' Supporting Cast, Path Split Special, Background Round, Distance Determination. If you take one of these quizzes and you (or other players) are in a special world, use the Funky plane return spot as that space for the quiz. If you're in a boss arena, use the boss entry space. If you're off the board in some other way, use the Start space.
- **Free Sample**
  If you're told to receive a random item, it implies you draw the top card of the Bazaar item draw pile. If you draw a gray card during this, discard it and continue until you get an item.
- **I'll Be Taking That**
  If you're told that you should receive a specific Bazaar item regardless of where it is: If it's in someone's inventory, take it from them. If it's in the Bazaar item draw pile, find it (ignore card stands) and then reshuffle the pile. If it's in the Bazaar item discard pile, take it from the pile and don't need to reshuffle.

Abilities (pink)

- **Unsuppressable Strength**
  If you build enough levels to reach a new ability point max threshold, you can't go below it again, even if you lose levels.
- **He's... Alive?**
  If Chunky Kong's "He's Dead" gets temporarily disabled, Chunky takes 3 lives and begins using the regular extra life system like other players do. He then puts those lives back in the supply when "He's Dead" is re-enabled.
- **Bottlenecked Buddies**
  If you're Kremling Krew in team mode, your teammate is bound by the same restrictions as you (can only reach 70 levels built, etc.). If you or your teammate builds a level, the builder buys a minion and you receive it. TODO: These may change for v5.1
- **Keep Krem and Carry On**
  If Kremling Krew builds a regular level (gaining a minion) and loses that level, they still keep that minion; after rebuilding that level, they don't buy another minion. If they build a boss level (unlocking its boss) and lose that level, they still keep that boss (it stays unlocked). If they build a final boss level, they don't buy any minion. TODO: These may change for v5.1
- **Nobody Wants to Work Anymore**
  If Kremling Krew needs to draw 3 from a particular game's minion pile (to buy one) and there's only 1 or 2, they just draw and choose from those. If there are 0, they don't buy a minion but are still allowed to build the level (no cash required). TODO: These may change for v5.1

Decisions and events (green)

- **I Got Nothin'**
  If you're told to lose A or B, and you don't have A but you do have B, you have to lose B. If you have neither, you're fine.
- **Choosy Chimp**
  If you're told to receive or give something with many options, and it doesn't say random, then it's your choice. If it says random but doesn't specify to do a die roll, then use a random number generator or shuffle (see Random Selection on page ## for more details).
- **Phinicky Phrasing**
  If you're told you "can", "have a choice to", "have a chance to", or "get to" do something, then it's your choice whether you do it or not. If you're told that you "must", "need to", "have to", or simply "do" something, then it's not your choice.

- **Can You Do the Can-Can?**
  If you're told you "can do A" and "can do B", then you're allowed to do just A, just B, or both, your choice. But if it says you "can do A and B", or "can do A and then B", or "can do A; if so, can do B", then doing B is dependent on doing A first. Use common sense and hopefully the natural logic of the way it's worded will make sense.
- **Thinking Positive**
  An effect being "positive" for you means you gain something in your inventory (unless it's something bad like a fake material), can take extra turns, or gain more options or capabilities. "Negative" means you lose these things. A bonus, etc. might have positive effects, negative effects, or both, for various different players. Some things let you ignore a bonus that is purely negative for you, meaning it has no positive benefits for you.
- **Can't Stop Time**
  If you have an effect that you can choose to activate "anytime", you can't do it if there's immediately about to be a change that would cause you to lose things that you'd use for that effect. For example, Lanky can't use his Clowning Around to change his camera pieces to another token type after he sees a bonus that would make him lose those tokens.
- **Who Dunnit?**
  If a condition is said to apply "if/when X is done" but doesn't specify who X is done by, it implies by any player, not just you (the person who drew/is reading the card).
- **Player Not Found**
  If some effect relies on a certain player being in the game but they're not there (because they're either isolated or have already finished the game), that effect doesn't happen. For example, Taj's 3 blue balloons effect can't be used if there's no opponents.
- **Order of Operations**
  If there's a situation where 2 players could both take an action but either both of them want to do it first, or neither wants to do it first: the player whose turn it currently is should make a decision if they're going to do anything, then continue clockwise as needed.

Building levels (red-orange)

- **Local Goods**
  A material that's "in DKC2" means a material that's required by default for at least 1 level in DKC2, or that you can get from a material space in a DKC2 world. Check in the materials list on the back of your level sheet: if a "2" is present next to that material, it's in DKC2. (Likewise for the other DKC games.)
- **Material Makeup**
  An "Enguarde level" for you means a level that requires Enguarde on your level sheet. This includes if an Enguarde was added to that level on your sheet as an extra requirement by some bonus, etc. However, if an effect would trigger when you build an Enguarde level, but you instead take a shortcut to skip Enguarde, that effect won't trigger for you.
- **Permanent Record**
  "If you've built Jungle Hijinxs" means if you've built it at any time in the past, even if you lost it later; this is in contrast to "If you currently have Jungle Hijinxs built".
- **Top to Bottom**
  The "level list" is distinct from the level sheet. The list is not a piece of paper, and instead means the sequential order of all levels from Jungle Hijinxs to Knautilus. Gang-Plank Galleon is "above" Pirate Panic in this list, even though on the paper it jumps higher up to the next column.
- **A World of Difference**
  Building a level *from* a certain world (grouped within that world on the level sheet) is different from building a level *in* that world (meaning you're standing in its world on the board).
- **Dubious DLC**
  Extra levels (like Necky Nutmare, or the Diddy Kong Racing levels that the Diddy Kong + Taj team can build) aren't included in the level list, but you can still write them somewhere on your sheet. Building them doesn't trigger any effects that normal level-building would, they don't count in your total levels built, and you can't select to lose them if you have to lose a level. But, they also don't require "!"s.
- **Lucky Day!**
  If you get to build a "free level", this means you can mark it as built without needing to pay cash or any material cards. Marking who built it first (who gets the star), saving at Candy's, and rolling for "!" still works as normal.
- **No Cheat Codes**
  If you're told to increase a "!" roll or get a free "!", that doesn't apply to final bosses, since you don't do an ordinary roll for them, and instead can only get their "!" when you beat their boss arena.
- **The Gold Standard**
  If the shortcut [Shortcut] symbol is present but not the bonus coins [Bonus Coins] symbol, it's still implied that you need bonus coins for a Lost World or Krematoa unless otherwise specified by an effect such as Gold Cogs.
- **Gold Got Goofed**
  It's common to forget to take bonus coins when building a boss level. It's fine to recalculate mid-game exactly how many bonus coins you should currently have, based on how many boss levels and Lost World / Krematoa levels you've built, and then gain or lose bills until you have the right number. The digital program also keeps track of this for you (go to the Materials tab, scroll down to the "Stats" section, and look for "Bonus Coins"). However, keep in mind that your number might differ if you've been permitted to skip bonus coins for some levels (for example, using the Gold Cogs item).
- **Gold Got Gone**
  There are only 60 bonus coins in the supply, but players could theoretically have a total max of 96. If you run out, write down each player's number they should have instead of using bills.
- **You've Paid Yer Debt, Matey**
  If you lose a Lost World or Krematoa level and rebuild it, you don't need to pay bonus coins for it again.

Game completion (yellow)

- **He a Little Confused**
  It's possible to lose homework/music points from some effects, and you can even go below 0 total points. If something says to lose "homework points", it means you lose combined homework/music points. You'd still lose points even if you've only completed music so far.
- **Grad-Student Studying**
  You're allowed to complete more homework assignments and songs even if you're at 200 points or above. (You might want to do this to get more homework prizes, or options for song effects.)
- **Not So Fast, Fighter**
  If you reach a K. Rool entry requirement (built all levels or gotten all "!"s), it doesn't permanently unlock that fight for you - if you fall below on that requirement, you'll need to make that bit of progress back again before you can enter that arena. But, if you're already in the arena and you lose that requirement, that doesn't cause you to get kicked out.
- **Not So Fast, Finisher**
  If you reach an endgame requirement (built all levels, gotten all "!"s, completed scrapbook, 200 homework/music points, all final boss fights, all banana birds), it's not permanently completed for you - if you fall below on one of those requirements, you'll need to make that bit of progress back again before you can win.

General gameplay (gray)

- **Pronoun Panic**
  "They", "them", and "themself" are often used as singular-person pronouns in this game's text. If "he", "she", or "they" is used in reference to a Kong or other character, it still applies to someone playing as that character even if their own pronouns don't match.
- **Five's a Crowd**
  You're free to try playing the game in nonstandard ways, like with 5 or more players, a player controlling multiple characters, or team mode with more or fewer than 2 players per team. If you do, and you run into issues with things not working properly for that player distribution, follow them as best as you can, and use group consensus to decide if their effects should be adjusted (or removed entirely).
- **All Tied Up Again**
  If players are competing in something (from a bonus, etc.) and they tie (and it's something that can end in a tie, unlike Expresso racing), use this logic if there's no tiebreaker rules specified:
  2 players tie for 1st: they both get 1st prize, next gets 3rd prize, and so on.
  3 players tie for 1st: they all get 1st prize, next gets 4th prize.
  4 players tie for 1st: they all get 1st prize.
  2 players tie for 2nd: they both get 2nd prize, next gets 4th prize.
  2 players tie for 1st, and the remaining 2 players tie: top 2 both get 1st prize, others both get 3rd prize.
- **Banana-Split Teams**
  If players are competing in something (from a bonus, etc.) in team mode, it's always individual players competing rather than teams, unless specified otherwise.

Digital Program

TODO
Cranky: Pencil and paper, that's all we ever used to need - and by gum, we *liked* it. Hurts my eyes to look at those tiny screens all the time.

Bonus Details

Certain bonus cards have text too long and detailed to fit on a small card, so they'll refer you to this section to get the full information. The titles are in alphabetical order. Don't read them yet, unless you don't care about spoilers...

Betrayal at Bungalow on the Hill (4-E-9)

In an alternate timeline, K. Rool cancelled his attempt to steal the bananas, due to the Kongs' bungalow being haunted with a terrifying supernatural power. But you and your friends aren't afraid, and decide to venture there for a taste of the rumored treasures within... First, get 2 copies of each of these 10 environments from the supply: Altar, Banana Hoard, Barn, Castle, Factory, Jungle, Library, Mines, Pipes, Scaffolding. Put 1 of each copy into a "room" deck, and 1 of each into an "omen" deck, both face-down and shuffled.

To start, draw 1 card from the room deck, place it face-up in the middle, and put everyone's character pieces on it (first mark where everyone was). Face-up rooms represent the bungalow layout. This game is all self-contained in the 1 turn of the player who got this bonus, so "turns" after this just refers to turns in the minigame sequence. On your turn, roll a 3-side die [Unbounded] to move between connected rooms. If you move outside a room, you can draw a face-down room and connect it face-up to the one you're currently in; each room can be connected to up to 3 others (touching at an edge).

If everybody's taken a turn and a betrayer hasn't yet been discovered, then at the start of your turn, flip a coin: tails = you're the betrayer, and all other players (the "survivors") are on a team against you! When this happens, the betrayer loses 2 turns [Counter], and each survivor draws 2 omen cards. Their goal is to discard all their own omens, and the only way to do this is when they're standing in that depicted room on their turn. Meanwhile, the betrayer's goal is to eliminate all competition! At the end of their turns, they can attack 1 survivor in their room by rolling an 8-side die [Unbounded] while the survivor rolls a 4-side. [Unbounded] If the survivor wins the roll, the betrayer loses another turn. Otherwise, the survivor... doesn't survive: they drop their omen cards in that room (other survivors must come pick them up) and they get removed from the bungalow.

If all survivors are eliminated, the betrayer wins; if all omens are successfully discarded, everyone else wins. Each winning player can take a copy of a face-up room's environment, and can visit the music pool. (Discard the rooms and omens afterward.)

Funky's Armory (4-A-25)

Choose to buy one or more of these freshly stocked weapons in the shop (all 1-time immediate use):

- Kong Knife ($20): If an opponent is 10 spaces from you or closer, close-range disrespect them and steal a 2-card level they've built but you haven't. [Shortcut] [Bonus Coins]
- Peanut Sheriff ($80): High-impact with a lot of rekoil. Roll to move again; you can either go forward or bounce backward that many spaces, and land on the space (can use golden feather).
- Coconut Odin ($320): Powerful enough to shoot through walls, including bonus room entrances. All levels you build for your next 3 turns [Counter] will automatically win the "!" roll. [Shortcut]
- Pineapple Operator ($450): Long enough range to snipe opponents from anywhere on the map; make all opponents lose 2 tokens of their choice.
- Cool-Looking Skin Pack ($8855): Take its bonus item. Has no gameplay benefits - but man, does it look cool... [Achievement]

Guess Who? (3-B-11)

Flip a coin: heads = play against the opponent to your left, tails = to your right. Each of you 2 secretly selects 1 of these 24 characters, either by rolling a 24-side die (other player can't see) or just picking a number, and then writes it down.

Starting with you, the 2 of you alternate making guesses to narrow down the set of characters the other player might have picked, or guess the exact character. (Play this all at once during your turn.) Guesses can involve the character's appearance or other attributes about them (such as "are they playable in a video game"), but they can't combine discrete things that aren't normally together in one defined category (such as "do they have a shirt *or* shoes"). Whoever successfully guesses their opponent's character first takes $4000 divided by their own number of guesses (round up to nearest $5) and 1 of each type of sticker.

Horoscopes (1-D-15)

Each player rolls a 12-side die to get their fortune read:

- 1 = Aquarius: Ambitious but independent. Land on any Bazaar, but can't trade.
- 2 = Pisces: Someone will help you if you keep your promise to them. Pick 1 of these: Cranky, Funky, Candy, Wrinkly, Swanky, or Bazaar. If you land on that kind of space before you reach Start, receive 2 tokens of choice.
- 3 = Aries: Your way of life is simple, 'cause you just do what you please. Set your next movement roll to whatever number (that's valid for your character) that you want.
- 4 = Taurus: A return to your roots. Receive up to 3 cards (can take duplicates) that are requirements in the first level you built.
- 5 = Gemini: Double up on your efforts. Immediately take 2 more turns.

- 6 = Cancer: You'll search far and wide, and eventually find what you seek. Pick a random space on the board. [Random] The next time you reach it, receive a card of choice.
- 7 = Leo: Exciting trips with friends ahead. The next time each other player flies with Funky, you warp to or land on (same as them) their target space for free.
- 8 = Virgo: Time for fresh new beginnings. Land on the Start space.
- 9 = Libra: Balanced in mind and body. If possible, the next 2 levels you build must have equal number of required materials; if so, their price is free. [Shortcut]
- 10 = Scorpio: New tools will be soon at your disposal. Receive the top item from the Bazaar draw pile for free.
- 11 = Sagittarius: Boldly venturing into uncharted territory. If possible, the next 2 levels you build [Counter] must be ones no one has built; if so, roll for "!" with a 12-side die.
- 12 = Capricorn: Saving for a rainy day. Take the top card of a bonus draw pile and hold onto it face-down. Can replace the effect of a space you land on, and draw that bonus instead. [Priority]

MahKong (3-D-16)

First, get these 28 material cards from the supply and place them in 1 shuffled face-down pile in the center:
Environments: 3 Banana Hoard, 1 Caves, 3 Coral Reef
Resources: 3 Boss, 1 Chase, 1 Drums, 2 Gauntlet, 1 Lights, 2 Spawners, 1 Tires, 3 Water, 1 Wind
Animals: 3 Enguarde, 3 Squitter

The goal is to have the highest-value hand of Mahkong cards at the end. Hide your cards so other players can only see the backs. This game is all self-contained in the 1 turn of the player who got this bonus, so "turns" after this just refers to turns in the minigame sequence. Similarly, "cards" just refers to material cards used for this minigame, not other cards in your inventory.

Starting with you and continuing to the left, each player takes turns: they draw a card from either A: the middle draw pile, or B: the set of discarded cards, and then discard a card. If B, they must say "pon", and stop (they don't take any more turns). Once everyone has stopped or there are discarded cards equal to the number of players times 3, the game ends.

At the end, sum up the cash value of your cards that make up a pair, triplet, or set of required cards for a real level. The player with the highest total value can keep 2 of their Mahkong cards for their inventory. Warning: If you break a rule, flip the table, or otherwise disrespect this ancient tradition, then you have committed a "chombo", and are penalized by being publicly shamed. [Achievement]

Poker Hands (I-117)

Check this chart for the various 5-card poker hand types:

Name	***Explanation***	***Poker dice example***	***Playing cards example***
5 of a kind	All 5 are the same value	A, A, A, A, A	Not possible, since there's only 4 suits, and 1 value per suit
4 of a kind	4 matching values, 1 that doesn't match	K, K, K, K, 10	club A, heart A, spade A, diamond A, club 2
Straight	All 5 values make a row where each is 1 value apart	A, K, Q, J, 10	spade 8, spade 7, heart 6, club 5, spade 4
Full house	3 matching values, 2 other matching values	Q, Q, Q, 9, 9	diamond 10, club 10, spade 10, club 7, heart 7
3 of a kind	3 matching values, 2 that don't match	10, 10, 10, A, J	heart 2, club 2, diamond 2, heart K, diamond K
2 pairs	2 matching values, 2 other matching values, 1 that doesn't match	A, A, K, K, Q	heart A, spade A, diamond 9, spade 9, spade 7
1 pair	All 5 values are different (and don't form a straight)	A, Q, J, 10, 9	spade J, spade 10, heart 8, spade 7, club 3

Sheriff of Kongingham (4-D-10)

You, the newly-appointed sheriff, must look away from the board for the duration of this bonus, or each other player has to move their inventory below the table so it's not visible. Each other player chooses 1 to 5 cards (materials/items) from their inventory to try and bring across the border. They tell you what they're transporting, although they might be lying. Resources are fine and legal, but all other types (according to what they say on the back of the card) are contraband. As the sheriff, use your discerning judgment to guess if each player is telling the truth. If you trust a player, they can go ahead and receive money equal to each of their transported resource cards' cash values... and for each contraband card they successfully smuggled, they get ***double*** those cards' value. Merchants can try to barter with the sheriff and convince you to turn a blind eye. If you choose to inspect a merchant's wares: If they told the truth ***and*** have no contraband, then instead of collecting money from the bank (same amount as described above), the merchant collects it from ***you*** as retribution for false accusation. But if they were lying and/or they have contraband, you confiscate all of that player's transported cards... and keep them for yourself.

Space Alert (4-E-10)

Things have been going smoothly so far on your team's space flight to Planet Plantaen, but not for long... Refer to the "Space Alert" bonus details in the *digital* rules [Rulebook: ##], click [This Button], and prepare to avoid annihilation!

stake.kong (K-19)

K. Rool has hacked into Swanky's Casino to create an online gambling site called "stake.kong", and all players are misled into testing out some of the games with the hopes of winning a fortune. Starting with you and continuing to the left, each player flips a coin to determine what game to play:

- Heads: K. Rool's dice game - Stake half of all your cash on a 20-side dice roll, and you guess whether the roll will be over or under 10.5. If you win, keep the money; if you lose, it goes down the virtual toilet.
- Tails: K. Rool's plane game - Stake half of all your cash. Draw 1 Funky card and place it in the middle of the board. Roll a 20-sided die (have to release it off the side of the board, can't be directly above) and try to land it on top of the card. If you do, get your staked cash back and also win $100 times your dice roll. [Unbounded] If you miss, watch as your staked cash flies away back into the supply. You'll get 'em next time!

Cranky: Remember when Gunship used to be some sort of boneheaded special case, and you could only get it as a prize for building Stronghold Showdown? Glad the designers finally got some sense knocked into them.

Version History

Version	*Date developed*	*Features*
v1.0	Nov 2011 - July 2013	The first prototype of the game was developed by Justin in high school. The board included generic spaces like "Receiving Money", "Trading", and "Unlucky", and was drawn by hand on a simple piece of blue posterboard. We've come a long way since then!
v1.1	May 2015	The level checklist was redesigned from vertical into horizontal, showing images of each world's gameplay, and introducing a resources wish list.
v2.0	June 2016 - Aug 2018	In this version, the complete board with colors and images was designed and printed out. Tokens were given new abilities (instead of being simply income), Kongs were given some new differences, "!"s and extra lives were added, and the various spaces were reworked to be related to various Kong family members. The Hacksaw resource was removed, and Ghosts and Rising Danger were added. And, a new, cleaner rules document was made.
v3.0	March - April 2020	Josh joined in collaborating on the board game's design starting here. He introduced the concept of items, boss levels, and character abilities, and created a few new special space minigames. The Banana Hoard, Boss, Storm, and Gunship resources were added, and to fit all of these, some spaces on the board were taped over. This version also marked the debut of Tiny, Lanky, Chunky, the bonus coin system, $5000 bills, and a lot of new colorful dice.
v3.1	May 2020	Swanky's bonus quizzes were modified to be more fair. Animal tokens were introduced to make bonus cards more appealing (collect 1 each time you draw a bonus card, 3 = resource of choice). However, they wouldn't stick around long, due to the complete bonus card reworking in the near future.
v4.0	June 2020	The beginning of a long stretch of re-development. In this phase, we started to re-balance all the resources present on the board, since some of them were not represented evenly.
v4.1	Nov - Dec 2020	The Angry Fish resource was removed, and Angry Foe, Fire, Poison, and Spawners were added. More resource balancing.
v4.2	Dec 2020 - Sept 2021	A very big update! Wrinkly moved from her Save Cave back into Kong Kollege, and Candy has taken over saving duties, as well as managing a whole new ability-swapping system with crystal coconuts. The board has been re-worked and re-printed, most notably with Queen Banana Bird added, and K3 moving in the opposite direction. All the bonus cards were adjusted, with lots of new ones added, in order for the whole bonus card system to be more intrinsically enticing. Lots of items and bonus items were added, as well as whole new sets of cards for Wrinkly and Swanky's spaces. "Level materials" is now the generic term for animals, environments, and resources, in order to be less confusing, and all the materials' counts and prices have been re-balanced. The Angry Foe and Race materials were combined into Chase, $1 bills were removed, and Taj and Xananab have joined as characters. And finally, all the cards were re-printed on higher-quality glossy cardstock, the level sheets were updated with material icons and re-printed on larger paper, and the rules document has been updated from 6 pages into a whopping, comprehensive 33 pages.
v4.3	July - Dec 2023	Another hefty update - the manipulative Klubba makes his debut, bringing along his painful K. Rool's Krap cards. The all-new team mode appears, a long time in the works, and includes a whole host of special duo abilities for each combo of characters. (With most games being solely Austin, Josh, and Justin, we're hoping to scout out some unsuspecting new victims to join us for an exciting 2-on-2 battle.) Cranky's space gains the competitive Expresso Racing minigame. Bonus spaces are made even more enticing with "!" rerolls and the return of animal tokens. Besides that, several new abilities for all the characters have been added, existing abilities and items have been balanced with help from Austin's judgment, and various little rule adjustments have been made, hopefully making things more clear and fair - but won't be surprised if more unforeseen changes are needed down the road.
v5.0	March 2024 - July 2026	No bigger update has come before, and likely none this massive shall come again...! Loads of complex new features and characters arrive, along with a fresh coat of paint (literally, for tokens) and the rebalancing and reprinting of every single card in the game. Say hello to VoidCo, the Kremling Krew, and K. Rool himself, each of them being characters with a unique system of getting things done. Wrinkly's homework assignments are now supplemented by Candy's songs: players collect music notes and gain special effects. Swanky's opening new casino minigames, complete with a deck of flashy playing cards to up the ante. Final bosses are revamped to be more interesting than simply rolling a die. Bazaar's shop is balanced with separate material and item stacks. New colors and categories of items are introduced, including gray, utility, and special materials.

		That brings us to special worlds: separate boards you can travel to if you're lucky, obtaining and doing cool things you can't get anywhere else. Altar and Electricity are now promoted from fake materials to real, and in the spirit of equality, Gunship is no longer special. A boatload of exciting new bonuses, items, and abilities abound, including new gray abilities that can be purchased by any character - just one part of the new progressive system of gaining more ability points as you build more levels. There are new carefully-worded definitions for common terms in the game, colorful symbols that compactly refer to certain rules, and mini quick guide cards to easily reference things without needing to search in the rulebook. The board has been re-worked yet again, this time with mathematically balanced material spaces, and re-printed in a professional foldable form. Gone are the simple boxes to hold all material cards in one big stack to dig through, and gone are the dozens of piles taking up excessive table space, since Josh has now constructed a tower of drawers to efficiently store and grab any supplies in the game. And to top it all off, a new computer program is introduced to assist with keeping track of information throughout the game. High-polish, high-technical, and even stacked higher up above the table - we hope this update brings the DKC Board Game to new heights of quality!

Final Notes

Banana bird = Justin Patrick a.k.a. RC Spriter
Bunky Kong = Josh Patrick a.k.a. Jp4
Dance dance barrel = Austin Brehob a.k.a OrangeToaster
DK mugshot = Everett Williams a.k.a. PapaMoocho

A big special thanks to Joshua Patrick and Austin Brehob for sticking with me all these years (decades now) to help develop and playtest this behemoth of a game! I also want to give a shoutout to Tom Choe, Everett Williams, Josh's crazy roommates, and members of the Patrick and Brehob families for helping out and giving the game a try, and to all new players in the future. Hope you enjoy!
